Engineering Log

Project No.: 292549

Client: City of Norwood	Commenced: 15/01/2025
Project Name: Geotechnical Investigation - St. Peters Billabong	Completed: 15/01/2025
Hole Location: Refer to BH Plan	Logged By: YW
Hole Position: 282314.59 mE , 6135039.98 mN Coordinate System: MGA2020 54H	Checked By: JT, PP
Drill Model: Commachio Geo 405	RL Surface: 33.47m
Drill Operator: Underdale Drillers	Hole Diameter: 50mm
	Datum: AHD

Drilling Information						Soil Description						Observations		
Method	Penetration	Water	Samples Tests Remarks	RL (m)	Depth (m)	Graphic Log	Classification Symbol	Material Description Fraction, Colour, Structure, Bedding, Plasticity, Sensitivity, Additional	Moisture Condition	Consistency / Relative Density	Estimated Ipt	DCP Results	Blows	Structure and Additional Observations
A/H			SPT: 13.00m 2.4, 6 N=10 <											

Pavement

Photo

Method	Penetration	Water	Samples and Tests	Moisture Condition	Consistency/Relative Density
A/H - Hollow auger SA - Solid auger	No resistance range to refusal Complete Loss	Level (Date) Inflow Partial Loss Complete Loss	U - Undisturbed Sample D - Disturbed Sample SPT - Standard Penetration Test PP - Pocket Penetrometer	D - Dry M - Moist W - Wet	VS - Very Soft S - Soft F - Firm Vst - Very Stiff H - Hard fb - Friable VL - Very Loose L - Loose MD - Medium Dense D - Dense VD - Very Dense
			Classification Symbols and Soil Descriptions	Plastic Limit	
			Based on Unified Soil Classification System	> PL = PL < PL

Engineering Log

Project No.: 292549

Client: City of Norwood	Commenced: 13/01/2025
Project Name: Geotechnical Investigation - St. Peters Billabong	Completed: 13/01/2025
Hole Location: Refer to BH Plan	Logged By: YW
Hole Position: 282371.55 mE , 6134800.00 mN Coordinate System: MGA2020 54H	Checked By: JT, PP
Drill Model: Commachio Geo 405	RL Surface: 32.68m
Drill Operator: Underdale Drillers	Hole Diameter: 50mm
	Datum: AHD

Drilling Information					Soil Description							Observations		
Method	Penetration	Water	Samples Tests Remarks	RL (m)	Depth (m)	Graphic Log	Classification Symbol	Material Description Fraction, Colour, Structure, Bedding, Plasticity, Sensitivity, Additional	Moisture Condition	Consistency / Relative Density	Estimated Ipt	DCP Results	Blows	Structure and Additional Observations
A/H			SPT: 13.00m 6,6/40mm	20	12.5		<CO NT> SP	<CONT> Gravelly SAND, medium to coarse grained, grey cream brown, trace clay & silt, gravel, fine to coarse grained, sub-rounded to angular, up to 40mm, poorly graded.				5		
					13.0			12.9m - 13.0m: Silty SAND, fine grained, low plasticity, trace of sub-rounded gravel to 35mm, yellow, moist.	W	MD	0%	10		
					13.5			13.4m - 13.5m: Silty SAND, fine grained, low plasticity, trace of sub-rounded gravel to 25mm, yellow, moist.				15		
					14.0		SP	SAND, fine grained, yellow brown, poorly graded.	W		0%	20		
					14.5		MH	Clayey SILT, dark grey, high plasticity, trace sand & gravel, horizontal beddings, sulphate odour.	>PL	fb - VSt	1%			
			14.50m: PSD and Atterberg Limits sample SPT: 14.50m 4,7,13 N=20	18	15.0		SC	Clayey SAND, fine to medium grained, dark yellow brown, low plasticity, with silt.	W		0.3%			
			PP: 15.55m 150kPa 15.60m: Soil aggressivity sample	17	15.5		CL-CI	Silty CLAY, low to medium plasticity, grey dark mottled green, trace gravel, angular, up to 30mm, sulphur odour.	>PL	F - St	1%

Material Test Report

Report Number: 292549-2A
Issue Number: 1
Date Issued: 29/01/2025
Client: City of Norwood, Payneham & St. Peters

Project Number: 292549
Project Name: City of Norwood, Payneham & St. Peters : St Peters Billabong, ST PETERS SA 5069
Project Location: St Peters Billabong, ST PETERS SA 5069
Work Request: 4030
Sample Number: 25-4030A
Date Sampled: 15/01/2025
Dates Tested: 21/01/2025 - 24/01/2025
Sampling Method: Sampled by Client
The results apply to the sample as received
Preparation Method: AS 1289.1.1 - Sampling and Preparation of Soils
Sample Location: Refer to BH Plan, Depth: 1.0m-1.5m
Lot No: BH01
Material: Sandy CLAY - (CI)

Material Test Report

Report Number: 292549-2A
Issue Number: 1
Date Issued: 29/01/2025
Client: City of Norwood, Payneham & St. Peters

Project Number: 292549
Project Name: City of Norwood, Payneham & St. Peters : St Peters Billabong, ST PETERS SA 5069
Project Location: St Peters Billabong, ST PETERS SA 5069
Work Request: 4030
Sample Number: 25-4030F
Date Sampled: 15/01/2025
Dates Tested: 21/01/2025 - 24/01/2025
Sampling Method: Sampled by Client
The results apply to the sample as received
Preparation Method: AS 1289.1.1 - Sampling and Preparation of Soils
Sample Location: Refer to BH Plan, Depth: 15.5m-16.0m
Lot No: BH02
Material: SILT - (MH)

Method Summary

Method ID	Methodology Summary
INORG-001	pH - Measured using pH meter and electrode. Please note that the results for water analyses are indicative only, as analysis can be completed outside of the recommended holding times. Solids are reported from a 1:5 water extract unless otherwise specified. Alternatively, pH is determined in a 1:5 extract using 0.01M calcium chloride or a solid is extracted at a ratio of 1:2.5 (AS1289.4.3.1), pH is measured in the extract.
INORG-002	Conductivity and Salinity - measured using a conductivity cell at 25°C. Soil results reported from a 1:5 Soil:Water extract unless otherwise specified. Please note Resistivity is estimated by calculation and may not correlate with results otherwise obtained using the Resistivity current method (based on AS 1289.4.4.1), depending on the nature of the soil being analysed.
INORG-081	Anions determined by Ion Chromatography. Waters samples are filtered on receipt prior to analysis. Solids are analysed from a water extract. Alternatively determined by colourimetry/turbidity using Discrete Analyser.

Certificate of Analysis MGA0250

Result Definitions

Identifier	Description
NR	Not reported
NEPM	National Environment Protection Measure
NS	Not specified
LCS	Laboratory Control Sample
RPD	Relative Percent Difference
>	Greater than
<	Less than
PQL	Practical Quantitation Limit
INS	Insufficient sample for this test
NA	Test not required
NT	Not tested
DOL	Samples rejected due to particulate overload (air filters only)
RFD	Samples rejected due to filter damage (air filters only)
RUD	Samples rejected due to uneven deposition (air filters only)
##	Indicates a laboratory acceptance criteria outlier, for further details, see Result Comments and/or QC Comments

Quality Control Definitions

Blank

This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, and is determined by processing solvents and reagents in exactly the same manner as for samples.

Surrogate Spike

Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

LCS (Laboratory Control Sample)

This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.

Matrix Spike

A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.

Duplicate

This is the complete duplicate analysis of a sample from the process batch. The sample selected should be one where the analyte concentration is easily measurable.

Certificate of Analysis MGA0250

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria. Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction. Spikes for Physical and Aggregate Tests are not applicable. For VOCs in water samples, three vials are required for duplicate or spike analysis.

General Acceptance Criteria (GAC) - Analyte specific criteria applies for some analytes and is reflected in QC recovery tables.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% - see ELN-P05 QAQC tables for details (available on request); <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase. Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was typically insufficient in order to satisfy laboratory QA/QC protocols.

Miscellaneous Information

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached. We have taken the sampling date as being the date received at the laboratory.

Two significant figures are reported for the majority of tests and with a high degree of confidence, for results <10*PQL, the second significant figure may be in doubt i.e. has a relatively high degree of uncertainty and is provided for information only.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS where sediment/solids are included by default.

Urine Analysis - The BEI values listed are taken from the 2022 edition of *TLVs and BEIs Threshold Limits by ACGIH*.

Air volume measurements are not covered by Envirolab's NATA accreditation.

Data Quality Assessment Summary MGA0250

Client Details

Client	FMG Engineering (Adelaide)
Your Reference	292549
Date Issued	24/01/2025

Recommended Holding Time Compliance

Recommended holding time exceedances exist - See detailed list below

Quality Control and QC Frequency

QC Type	Compliant	Details
Blank	Yes	No Outliers
LCS	Yes	No Outliers
Duplicates	Yes	No Outliers
Matrix Spike	Yes	No Outliers
Surrogates / Extracted Internal Standards	Yes	No Outliers
QC Frequency	Yes	No Outliers

Surrogates/Extracted Internal Standards, Duplicates and/or Matrix Spikes are not always relevant/applicable to certain analyses and matrices. Therefore, said QC measures are deemed compliant in these situations by default. See Laboratory Acceptance Criteria for more information

Data Quality Assessment Summary MGA0250

Dear Josef,

Re: St Peters Billabong Study – Geotechnical Engineering Review – Findings and Recommendations

In reference to your email to me dated 14/2/25, you requested I provide advice pertaining to the following questions:

1. What type of works are recommended to be undertaken next (e.g., modelling, slope stability analysis, etc)?
2. What are the gaps in the data that the Council currently has?
3. What other recommendations do you have to assist Council's objective of ultimately addressing the erosion and slope stability issues of the Billabong?

Information Provided:

- Coffey St Peters Urban Wetland Slope Stability Assessment (14 December 2000);
- St Peters Billabong & River Street Property Boundaries - Boundary Identification Survey – A095019IDENT(B)-OVERALL (June 2020);
- Golder 12 Eighth Avenue St Peters Development Application Geotechnical Assessment Rev 0 (5 November 2020);
- Golder St Peters Billabong Riverbank Slope Geotechnical Assessment Report Rev 2 (24 November 2020);
- Golder St Peters Billabong Riverbank Slope Review of Erosion Control Matting Rev 2 (15 December 2020);
- Golder St Peters Billabong Riverbank Slope Engineered Solutions Report Rev 0 (22 June 2021);
- Pennino & Associates St Peters Billabong Slope Survey Rev 0 (24 January 2025) – PDF and CAD;
- FMG Engineering St Peters Billabong Factual Geotechnical Investigation Report Rev 0 (12 February 2025); and
- WSP St Peters Billabong Scope of Work for Geotechnical Investigation (4 November 2024).

Following our meeting onsite and walk over the crest of the embankments at St Peters Billabong, on 11/3/25, I provide the following observations and comments:

1. What type of works are recommended to be undertaken next (e.g., modelling, slope stability analysis, etc)?

As mentioned onsite, our walk over did not identify any areas of immediate concern. You directed me to an area of potential instability, between the two large trees, at the crest of the embankment immediately behind 7 River Street, St Peters, which presented, what looked like tension cracks, as shown in Figure 1. As I mentioned to you at the time, these are often early warning signs of potential instability of an embankment. However, the volume of soil within this potential slip circle failure appears to be modest, and therefore of no immediate concern. Nevertheless, it would be prudent to engage the services of a geotechnical engineering consultant, in the short-term, to investigate this section of the St Peters Billabong embankment and provide advice regarding its stability. I anticipate that the consultant, armed with the surveying and geotechnical engineering data that you currently possess, will undertake a site visit and subsequently carry out numerical slope stability analyses to evaluate the slope's factor of safety and/or probability of failure, and recommend appropriate action(s).

Figure 1. Likely tension crack suggesting potential instability at the crest of the embankment immediately behind 7 River Street, St Peters.

Also, as mentioned on site, the embankments are well vegetated with trees, shrubs and grasses. This vegetation is beneficial as it stabilises the embankments by reducing the moisture content of the soil, which increases its strength, and by providing root reinforcement, which also increases soil strength but also reduces erosion from surface

runoff. Hence, it is important for the ongoing stability of these embankments that the vegetation be retained.

It is noted from the Coffey (2000) report that the most vulnerable property associated with the St Peters Billabong embankments is 12 Eighth Avenue, as the fence line is very close to the edge of the cliff. It is also noted that Council is aware of the vulnerability of this site, as evidenced by the Golder (2020) report associated with a proposed development at this location. It is recommended that Council continue to examine the appropriateness of any new developments proposed in the future at this site.

2. What are the gaps in the data that the Council currently has?

Having reviewed the extent of Council's surveying and geotechnical data associated with the St Peters Billabong embankments, I believe that these are sufficient for Council's immediate and medium-term needs. The recent FMG site investigation report, provides a detailed assessment of the geotechnical engineering characteristics of the St Peters Billabong embankments. Geotechnical engineering consultants, when needing to assess the stability of a specific region of the Billabong's embankments, may require additional, site-specific, drilling and testing. However, should this situation arise, such additional work can be discussed, and assessed by Council, at that time.

It is noted that some new and large dwellings have been built on River Street (e.g. Nos. 5, 7, and 9), the rears of which are relatively close to the boundary fence, which is different in nature to the situation that existed 25 years ago, as outlined by Coffey (2000). It is expected that, as part of the approvals process, Council continues to examine the appropriateness of the distance between the rears of these properties and the edge of the embankment, as well as the suitability of the proposed foundations.

3. What other recommendations do you have to assist Council's objective of ultimately addressing the erosion and slope stability issues of the Billabong?

Comparing the photographs of the embankments included in the Coffey (2000) report, with their current state (Figure 2), suggests that the embankments have not retreated markedly over the intervening almost 25 years. However, it should be noted that this is a qualitative assessment. To provide rigour, it is recommended that Council inspect and photograph the fences along the crest of the embankment, that is between 12 Eighth Avenue and say 13 River Street on a regular basis, e.g. once every 5 years from the same location and perspective, to ensure that the rate of embankment retreat remains relatively modest, that is, approximately consistent with the "less than 1 m in 50 years" reported by Coffey (2000).

Council's efforts to identify and cost preliminary slope stabilisation and retaining wall options is noted. As significant slope instability is not evident at this time, nor is it expected in the near- to medium-term, it is recommended that these measures not be progressed

Figure 2. Current state of St Peters Billabong embankment.

further at this time. However, should evidence (e.g. photographic, described above, or other) suggest slope instability or accelerating embankment retreat, in the future, then Council will need to explore such options in detail.

Within Council's operating constraints, attention is directed towards the very prudent recommendations made on page 9 of the Coffey (2000) report, in particular:

- Suggest/advise some residents to move their fences away from the top of the slope;
- Restrict developments (such as buildings, swimming pools and elaborate landscaping) with a prescribed distance from the crest of the river bank (say nominally 10 m);
- Offer to move fences back for some residents;
- Erect warning signs for the public about the danger of falling from cliffs and cliff falls;
- Restrict public access; and
- Buy a strip of land at the back of some properties close to the top of steep slopes.

We trust that the contents of this letter provide you with the advice consistent with that expected. Should you require further clarification or advice, please do not hesitate to contact me.

Sincerely,

Emeritus Professor Mark Jaksa
Member

Dear Josef

Slope stability analysis at location of possible tension cracking St Peters Billabong, St Peters

1. Introduction

City of Norwood and Payneham & St Peters (NPSP) has engaged WSP Australia Pty Ltd (WSP) to undertake a slope stability assessment of the St Peters Billabong embankment behind 7 River Street, St Peters. Possible tension cracking was observed at the crest of the slope in this area during previous site visits.

Our services were carried out in general accordance with the scope of services outlined in our proposal PP224218-WSP-ADL-GEO-PRP-0001 Rev A, dated 9 May 2025.

This letter provides a summary of the slope stability analysis with high-level commentary on possible actions and/or remedial works for NPSP consideration.

2. Reference documents

The following reference documents were provided by NPSP and formed the basis of our analyses:

- FMG Engineering, 12 February 2025, Factual Geotechnical Investigation Report – St Peter's Billabong, 292549
- Pennino & Associates, 24 January 2025, St Peters Billabong Slope Survey, Proj ref. F1096, Rev 0 (PDF and .dwg files).

3. Site visit

A site visit was undertaken on 28 May 2025 to observe current site conditions. Based on previous observations, the location of the possible tension crack spans between two large trees that are situated on or just down slope of the crest. The trees are approximately 7 m apart and both appeared to be leaning slightly toward the billabong. A third large tree was also observed at the crest of the slope near the southern boundary of 7 River Street. It was noted that additional soil appeared to have been spread at the surface at the location of the possible tension crack, and there was no observable cracking or deformation at the surface at the time of the site visit, at the location where possible tension cracking was previously observed (Photo 3.1 and Photo 3.2). The approximate location of the tension crack was measured to be around 4 m from the property fence at its closest point. The upper portion of the slope appeared to be locally steeper midway between the two trees, with leaf litter and other debris observed, and vegetation present across the slope. Tree roots were observed from the opposite bank protruding from the slope beneath the tension crack (Photo 3.3).

WSP | Calibre acknowledges that every project we work on takes place on First Peoples lands.
We recognise Aboriginal and Torres Strait Islander Peoples as the first scientists and engineers and pay our respects to Elders past and present.

Photo 3.2 Tension crack filled (photograph taken 28 May 2025)

Photo 3.3 Slope at tension crack (photograph taken 28 May 2025)

4. Basis and method of assessment

4.1 Geometry of the slope and applied surcharges

The slope geometry used in the assessment has been based on the survey provided by NPSP. From the survey provided, five cross sections were cut through the billabong embankment between the three large trees present behind 7 River Street for comparison of the surveyed slopes. Section 2 (steepest localised) was used for the analysis, midway between the two trees where the possible tension crack is located (location shown on Figure 4.1 below).

Figure 4.1 Locations of cross sections at possible tension crack location

A summary of the slope geometry and applied surcharges adopted in the analysis is provided below:

- Billabong depths are not known – it is assumed that the billabong floor is level with the break of slope indicated on the survey.
- Billabong water levels – we have assumed that the billabong water level is at the same level as the shallowest groundwater level recorded in boreholes at a depth of 7.5 m below ground level (m bgl).
- The cross sections cut from survey of the embankment slope generally indicate that the height of the embankment is in the order of 8 m high from top of crest to bottom of the embankment with some variation in the angle of the slope between the upper, middle and lower portions of the slope. An indicative slope of bank is shown on the survey plan of 1V:1.3H to the south of the possible tension crack location and 1V:1.7H to the north.
- Surcharge load for house – for the purpose of our assessment, a 15 kPa surcharge load was applied approximately 5 m from the crest of the slope.

4.2 Assumed soil profile

The FMG Factual Geotechnical Engineering Report indicates the soils within the embankment at the locations investigated comprise fill (typically silty clay), over silty clay (described as upper natural fine-grained alluvium), variable clayey sand / gravelly sand / sandy gravel (described as natural coarse-grained alluvium), clayey silt / silty clay (described as lower fine-grained alluvium), and possible Blanche Point Formation. Two boreholes (designated BH04 and BH05) were drilled to a depth of 4 m bgl near to the possible tension crack location; and two deeper boreholes (designated BH01 and BH02) were drilled approximately 100 m northwest (BH01) and 80 m south (BH02) of the possible tension crack location. Geotechnical parameters for the soils encountered in the boreholes were considered for use in stability analyses, based on the descriptions presented on the borehole logs, results of field and laboratory testing, published correlations and WSP's previous experience with similar materials.

The analyses considered a range of values for the different material types encountered in the boreholes. A summary of the range of geotechnical parameters adopted in the analysis is provided in Table 4.1 below.

Table 4.1 Summary of Geotechnical Parameters (Range) adopted for analysis

Material type	Approx. Bottom of Unit* (m bgl)		γ (kN/m ³)	c' (kPa)	ϕ' (°)
	BH01	BH02			
FILL (Silty CLAY)	3.3	4.0	19	3 - 10	26 - 30
Silty CLAY	8.5	9.0	18	2 - 5	24 - 26
Clayey SAND / SAND / Sandy GRAVEL	11	14.5	20	-	31
Sandy Gravelly CLAY / Silty CLAY	11.5	-	18	2 - 3	24
Sandy GRAVEL	13	-	18	-	28 - 31
Clayey SILT / Silty CLAY	13.5	16	18	3 - 5	26
Sandy GRAVEL / Clayey Silty GRAVEL / Clayey SAND	15.3	16.1	18	-	28 - 31
Silty CLAY / Silty gravelly CLAY	16.3	16.35	18	2 - 5	24 - 26

Notes: γ = Bulk Unit Weight, c' = Effective Cohesion, ϕ' = Effective Friction Angle

*Material types and depths encountered based on BH01 and BH02. Note BH04 and BH05 (positioned closest to the tension crack location) were terminated at 4 m bgl

5. Slope stability analysis

5.1 General comments

Slope stability analysis was undertaken based on the geometry of a single cross section using the computer modelling program SLOPE/W (GeoStudio 2024.2.1).

- The section geometry and soil profiles are based on the information presented above. A sensitivity analysis was undertaken to consider a range of geotechnical parameters for the materials encountered in BH01, BH02, BH04 and BH05.
- A tension crack observed approximately 4.1 m from the house fencing was also included in the model, with analysis of a tension crack and a water filled tension crack.
- An earthquake loading scenario where a seismic coefficient of 0.1 was applied.

The SLOPE/W analysis was undertaken using the Morgenstern-Price method. Three different slip surface configurations were considered (refer Figure 5.1):

1. Global stability – slip surface extends from crest of slope to toe (includes upper and lower portions of the slope)
2. Upper slope stability – the slip surface is restricted to the upper portion of the slope only
3. Lower slope stability – the slip surface is restricted to the lower portion of the slope only.

Figure 5.2 Indicative SLOPE/W output showing calculated FoS and corresponding slip surface for selected case

Figure 5.2 provides a visual representation of the lowest calculated Factor of Safety (FoS) and corresponding slip surface for a selected analysis.

A summary of calculated Factors of Safety (FoS) for scenarios considered is presented in Table 5.1 below. The range of calculated FoS is based on the range of geotechnical parameters considered as part of the sensitivity analysis; note these cases did not include seismic loading. Further comment on the results is provided below.

Table 5.1 Summary results of slope stability analysis

Slip surface	Factor of Safety (calculated range)*
Global slope	1.0 to 1.4
Upper slope	1.3 to 1.9
Lower slope	1.1 to 1.5

Notes: *no seismic loading considered

For the purposes of the below discussion, a factor of safety of less than 1 indicates potential slope instability. However, we note that for engineered slopes / new construction a target factor of safety of 1.5 or above is typically adopted for analysis of long-term conditions and 1.1 under seismic loading.

Based on the geotechnical parameters adopted for the analysis, the results indicate that a slip surface could potentially occur that extends from the tension crack location at the crest, to the toe of the slope. However, we cannot rule out a more localised slip surface within the upper or lower portions of the slope.

Inclusion of a tension crack in the SLOPE/W model did not significantly change the calculated FoS.

Inclusion of a seismic load generally resulted in a decrease in the calculated FoS – for example, for the global case a decrease in FoS in the order of 10% to 20% was shown by the analyses.

It is possible that the two large trees either side of the tension crack and vegetation lower on the slope (Photo 3.3) may be contributing to the stability of the slope in some way, though this is not quantifiable. However, should the vegetation or trees be removed then this may impact on the stability of the slope.

6. Recommendations

Previous works undertaken by WSP (previously Golder) (Ref. 20139217-002-L-Rev2, dated 24 November 2020) identified erosion as a primary geotechnical hazard. However, the observation of a possible tension crack and analyses described herein suggest that instability of the slope could also occur based on the presence of the tension crack and slope geometry analysed.

With reference to the control measures and options for engineered solutions previously provided to NPSP, we provide the following recommendations for short term and long term control measures and remedial options.

Short Term

- Setup of an exclusion zone of at least 3 m for residents and the public from the crest of the slope. This should include installation of signage to warn of the possibility of slope instability.
- Maintain an exclusion zone for future developments for a lateral distance of 10 m from the crest of the slope.
- Ongoing inspections should be undertaken to assess the slope for signs of instability. Regular observation to be undertaken to observe changes in conditions by a suitably qualified person to assess the slope and crest for signs of instability. Regular survey and monitoring of the slope and crest could be considered to identify any changes in the slope.
- Maintain current vegetation
- Engage an arborist to undertake an assessment of the condition of the trees.
- Ensure runoff from residential properties is directed away from the slope and into the street stormwater system to limit the potential for over-slope flow or water infiltration into the possible tension crack.

Long Term

It is recommended that NPSP consider the implementation of an earthworks or structural solution to improve the overall stability of the slope in the long term, such as those presented in Golder report ref. 20139217-006-L-Rev0 (dated 24 November 2020).

We also recommend that NPSP consider the potential for instability along other sections of the embankment.

7. Limitations statement

Your attention is drawn to the document – “Limitations Statement”, which is included in Attachment B of this letter. The statements presented in this document are intended to advise you of what your realistic expectations of this report should be.

Yours sincerely

Limitations statement

Limitation Statement

This Report is provided by WSP Australia Pty Limited (*WSP*) for City of Norwood Payneham & St Peters (*Client*) in response to specific instructions from the Client and in accordance with WSP's proposal dated 9 May 2025 and agreement with the Client dated 13 May 2025 (*Agreement*).

Permitted purpose

This Report is provided by WSP for the purpose described in the Agreement and no responsibility is accepted by WSP for the use of the Report in whole or in part, for any other purpose (*Permitted Purpose*).

Qualifications and assumptions

The services undertaken by WSP in preparing this Report were limited to those specifically detailed in the Report and are subject to the scope, qualifications, assumptions and limitations set out in the Report or otherwise communicated to the Client.

Except as otherwise stated in the Report and to the extent that statements, opinions, facts, conclusion and / or recommendations in the Report (*Conclusions*) are based in whole or in part on information provided by the Client and other parties identified in the report (*Information*), those Conclusions are based on assumptions by WSP of the reliability, adequacy, accuracy and completeness of the Information and have not been verified. WSP accepts no responsibility for the Information.

WSP has prepared the Report without regard to any special interest of any person other than the Client when undertaking the services described in the Agreement or in preparing the Report.

Use and reliance

This Report should be read in its entirety and must not be copied, distributed or referred to in part only. The Report must not be reproduced without the written approval of WSP. WSP will not be responsible for interpretations or conclusions drawn by the reader. This Report (or sections of the Report) should not be used as part of a specification for a project or for incorporation into any other document without the prior agreement of WSP.

WSP is not (and will not be) obliged to provide an update of this Report to include any event, circumstance, revised Information or any matter coming to WSP's attention after the date of this Report. Data reported and Conclusions drawn are based solely on information made available to WSP at the time of preparing the Report. The passage of time; unexpected variations in ground conditions; manifestations of latent conditions; or the impact of future events (including (without limitation) changes in policy, legislation, guidelines, scientific knowledge; and changes in interpretation of policy by statutory authorities); may require further investigation or subsequent re-evaluation of the Conclusions.

This Report can only be relied upon for the Permitted Purpose and may not be relied upon for any other purpose. The Report does not purport to recommend or induce a decision to make (or not make) any purchase, disposal, investment, divestment, financial commitment or otherwise. It is the responsibility of the Client to accept (if the Client so chooses) any Conclusions contained within the Report and implement them in an appropriate, suitable and timely manner.

In the absence of express written consent of WSP, no responsibility is accepted by WSP for the use of the Report in whole or in part by any party other than the Client for any purpose whatsoever. Without the express written consent of WSP, any use which a third party makes of this Report or any reliance on (or decisions to be made) based on this Report is at the sole risk of those third parties without recourse to WSP. Third parties should make their own enquiries and obtain independent advice in relation to any matter dealt with or Conclusions expressed in the Report.

Executive Summary

The City of Norwood Payneham & St Peters engaged TreeSolve to conduct a Level 3 Advanced Assessment on three trees (Trees 1-3) located within the reserve adjacent to the rear of 5-9 River Street, St Peters. During this assessment, root mapping was undertaken via sonic tomography to ascertain the extent of the root plate of Trees 1-3. A visual tree condition assessment and tree risk assessment was also undertaken. This assessment will evaluate the trees current condition, calculate the trees risk rating, determine the extent of each trees' root plate and provide an assessment of each trees' stability.

The trees are located atop a large riverbank within the northeastern portion of the St Peters Billabong. The soil profile consists of a silty clay; however, this is likely imported fill, and no soil test was taken in this assessment. During the assessment it was observed that the soil directly adjacent to the trees was friable and significant collapse of the soil was noted as a result of the tree inspections. The tree roots are not expected to be found within the O (organic) or A (topsoil) soil horizons and instead at deeper horizons as is often encountered with trees growing in these conditions.

Trees 1 and 3 presented good overall condition albeit Tree 3 does display several moderate structural flaws, both these trees are expected to remain viable for an extended duration. Tree 2 displayed significant health disorders such as needle dieback, although remains structurally capable. This tree is expected to reach tree mortality within 5-10 years and there are no effective remedial treatments that can reverse this decline.

All three trees displayed significant structural root formation on the western aspect (bank face), indicating that tree stability is within normal parameters. Root mapping was undertaken within the eastern aspect of the rootzone and unsurprisingly, did not discover significant root density within the area as these soil profiles often cause structural roots to penetrate vertically and to greater depths as soil root cohesion within the profile cannot occur given the friable nature of the soil within the higher horizons.

A risk assessment was performed on Trees 1-3, when applying the ISA TRAQ method, all three trees achieved a low-risk rating. Despite the poor condition of Tree 2, no arboricultural works are required or have been recommended. The trees are providing significant structural integrity to the riverbank, and their loss would have deleterious effects on the stability and rates of erosion.

Thank you for engaging us to provide this information. If you require further clarification, please do not hesitate to contact us.

Yours sincerely,

Peter Oates

Objective

The City of Norwood Payneham & St Peters engaged TreeSolve to conduct a Level 3 Advanced Assessment on three trees located within the reserve adjacent to the rear of 5-9 River Street, St Peters. This assessment will determine the overall condition/risk of each tree and provide any suitable recommendations as required. A visual tree and risk assessment were undertaken on 2nd of September 2025.

This assessment has captured the following information in relation to the subject trees:

- A visual tree assessment of the trees including useful life expectancy and overall condition.
- Legislative status of the trees as defined within the *Planning, Development, and Infrastructure Act 2016*.
- Tree risk rating of the trees using the International Society of Arboriculture Tree Risk Assessment Qualification (ISA TRAQ).
- Location and distribution of the roots within the upper (eastern) portion of each tree's roots zone using the Rinn Method via sonic tomography.
- Any relevant crown management techniques as defined within Australian Standard AS4373-2007 *Pruning of amenity trees*.
- The impact on cliff stability in relation to the retention and/or removal of either tree and advice on whether further geotechnical or environmental assessments are warranted.

This assessment has captured the following information in relation to the site:

- Existing structures adjacent to or within the allotment.
- Recent or active soil disturbances or grade changes.
- Existing topography.
- Existing hydrology.
- Recent changes to wind dynamics and/or increase or decrease to exposure.
- Recent changes to light availability.
- Evidence of abiotic and/or biotic disorders or issues within the site.

Site Observations

Trees 1-3 are located within the reserve adjacent to the rear of 5-9 River Street, St Peters. (**Figure 1**). The root zone of each tree consists of open soil comprised of imported fill (east) and large, steep riverbank (west). The soil profile to the east is friable and likely a silty clay-based fill and is likely the result of the various residential dwellings to the east of the trees. Significant structural root activity was located on the downward side of the riverbank (**Figure 2**). All three trees have been crown lifted; this pruning is unlikely to be sanctioned by NPSP as the pruning did not conform with AS4373-2007 and would likely have been conducted to improve the view of the river from each residence.

Findings

The City of Norwood Payneham & St Peters engaged TreeSolve to conduct a Level 3 Advanced Assessment on three trees (Trees 1-3) located within the reserve adjacent to the rear of 5-9 River Street, St Peters. Root mapping via Sonic Tomography was also undertaken during the assessment.

Tree Observations

Trees 1-3 present the typical characteristics of *Pinus halepensis* – Aleppo Pine. Particularly Trees 1 and 3 as they have developed large domed shaped crowns, are singularly trunked and have a multitude of individual arranged lateral branches. Tree 2 however detracts from the typical formation of the species as it has been overshadowed by the two large and older neighbouring trees (Trees 1 and 3). In this case it has not developed a large crown, it has also been subjected to crown lifting that has removed several lower order branches. Trees 1 and 3 also present good health as demonstrated by the dense foliage, whilst Tree 2 shows significant signs of stress as indicated by the extensive needle dieback within this crown (**Figure 3**). It is likely that this tree will succumb to tree mortality within the next 5 years, however it does remain structurally capable.

Tree Risk Assessment

A tree risk assessment was conducted using the ISA Tree Risk Assessment Qualification (TRAQ) methodology. Trees 1-3 received a low-risk rating, indicating that risk mitigation measures are not warranted. The low-risk rating was based on an assessment of whole tree failure, with the likelihood of failure categorised as "possible" for Trees 1 and 3 and "improbable" for Tree 2 within a five-year assessment timeframe. The likelihood of failure impacting the primary target (pedestrians) was assessed as having a very low target frequency (rare occupancy). The consequence of the tree part failing and impacting the primary target was considered likely to result in severe injury.

This tree risk assessment was calculated using whole tree failure associated with riverbank collapse as the primary target. When the tree part was changed to a subordinate and scaffold branch and assessed the likelihood of branch failure occurring, the overall risk rating was still 'Low'. Whole tree failure was recorded in this instance given the nature of the site and current growing conditions of Trees 1-3.

Page | 13

Erosion and Riverbank Stability

The trees are located atop a large riverbank within the northeastern portion of the St Peters Billabong. The soil profile consists of a silty clay; however, this is likely imported fill, and no soil test was taken in this assessment. During the assessment it was noted that the structurally the soil directly adjacent to the trees was friable and significant collapse of the soil was noted as a result of their inspection. The tree roots are not expected to be found within the O or A soil horizons and instead at deeper horizons as is often encountered with trees growing in these conditions.

It is highly likely that the presence of the three trees is contributing to the overall stability of the bank in this location. As roots penetrate the soil and thicken, the amount of root soil cohesion increase, has additional roots spread to other unoccupied areas of the bank, so too does the root soil cohesion within the riverbank.

The silty clay soil does offer relative cohesion however is also characterised by reduced frictional resistance (friable). It is also known for crack formation due to its reduced hydraulic conductivity, the genus *Pinus* – Pine tree is not typically suited to these soils, however as the Aleppo Pine has shown throughout SA, it can be grown in most soils with success.

Erosion of the riverbank is quite pronounced in some areas, and has been exacerbated by the urban infill, particularly the dwellings within proximity to Trees 1-3.

Figure 4 displays soil collapse occurring during the inspection and highlights how unstable the eastern is particularly to foot traffic. To ensure that further erosion is not increased, public foot traffic and any future development past existing boundary lines must be restricted. Any proposed redevelopment of existing sites must consider geology of riverbank and obtain arboricultural advice and/or assessment when proposed redevelopment occurs within any Notional Root Zones.

Root Mapping

Root mapping of the root plate was conducted to ascertain the extent of the root plate of each tree. Sonic tomography was used to undertake this work. This was achieved by following root flare (if visible) in a radial pattern within the designated mapping area. In this case this was within the eastern area, as the trees lean away from the dwellings (westerly) any total tree failure would result in the root plate lifting, as this is striking distance of the southernmost dwellings infrastructure a level of detail in relation to the location of suspected trees roots and an overall indication of the six and of each trees root plate was requested.

The root map is drawn by adding an additional sensor to the sensor chain connected to the tree. This additional sensor is then added to a steel pole that is placed on the ground within a measured grid pattern. The pole is tapped at specified increments, (i.e., 50cm, 100cm) The stress wave signal is sent back to other sensors already attached to the tree. When roots are present the signal transmits rapidly along the roots, creating a pathway that can be mapped to define the extent and location of the root system. By mapping out the stress wave patterns from a comprehensive grid pattern, the root locations can be defined. Roots with diameter as small as 2cm in a depth of down to 50cm are detectable. Overall-stress wave speeds from pin to sensor ranges from approximately 100 to 500m/s.

Figures 5-7 displays the graphs captured during the assessment. Values between are 169-692m/s are considered root density. Below 169 m/s is not considered root density as the velocity is too slow indicating that signal deviation generated an excessively long duration. Above 692 m/s is unclear what was located, however at these velocities is unlikely to be root, and could possibly be a utilities trench.

Recommendations

The following management techniques have considered the site, tree species and are in accordance with industry best practice and specifications: -

Risk Management

- A tree risk assessment should be undertaken on Trees 1-3 in four years by a qualified arborist in accordance with a recognised tree risk assessment methodology.

Riverbank Management

- Restriction of public foot traffic through the reserve area adjacent to the trees.
- Restriction of any future development past existing boundary lines.
- Any proposed redevelopment of existing sites must consider geology of riverbank and obtain arboricultural advice and/or assessment when proposed redevelopment occurs within any Notional Root Zones.

TREESOLVE PTY. LTD.
ABN: 57 675 434 376

WWW.TREESOLVE.COM.AU

Conclusion

A Level 3 Advanced Assessment was undertaken by TreeSolve on three mature examples of *Pinus halepensis* – Aleppo Pine on the behalf of the City of Norwood Payneham & St Peters.

The findings from the assessment are as follows: -

- Trees 1-3 are maintained assets of the City of Norwood Payneham & St Peters achieving a trunk circumference greater than 1 and 2 metres, they are therefore classified as a significant and regulated trees as defined within the *PDI Act 2016*.
- A tree assessment was conducted on 2nd September 2025, good overall condition was presented by Trees 1 and 3, whilst Tree 2 demonstrated poor overall condition.
- The soil directly adjacent to the trees was friable and significant collapse of the soil was noted as a result of their inspection.
- All three trees displayed significant structural root formation on the western aspect (bank face), indicating that tree stability is within normal parameters.
- Root mapping via Sonic Tomography did not identify significant root activity within the eastern area of root zone.
- A risk assessment was performed on Trees 1-3, when applying the ISA TRAQ method, all three trees achieved a low-risk rating. Despite the poor condition of Tree 2, no arboricultural works are required or have been recommended.
- The trees are providing significant structural integrity to the riverbank, and their loss would have deleterious effects on the stability and rates of erosion, therefore tree retention is recommended.

ISA Tree Risk Assessment Methodology

The tree risk assessment methodology used by TreeSolve for the trees at **St Peters Billabong** is the International Society of Arboriculture Tree Risk Assessment Qualification. It is a qualitative tree risk assessment model, widely used in the Oceania region, the USA and UK.

The **timeframe** for this tree risk assessment is **5 years**; this duration applies to the length of time the subject trees are assessed in and the likelihood of any tree part failing within that timeframe. The **inspection interval** denotes the frequency of **tree risk assessment** within the **assessment timeframe**. There is no **inspection interval** for this tree as the tree has been recommended for removal. The following matrices are used to generate the overall risk rating; the residual risk is the risk that remains post mitigation.

1. **Likelihood Matrix** - the Likelihood Matrix below displays the first likelihood of failure categories and the likelihood of impact categories.

Likelihood of Failure	Likelihood of Impact			
	Very low	Low	Medium	High
Imminent	Unlikely	Somewhat likely	Likely	Very likely
Probable	Unlikely	Unlikely	Somewhat likely	Likely
Possible	Unlikely	Unlikely	Unlikely	Somewhat likely
Improbable	Unlikely	Unlikely	Unlikely	Unlikely

2. **Risk Rating Matrix** – the results from the first matrix (above) are combined, then the consequence of a failure (below) occurring is chosen with the overall risk rating categorised.

Likelihood of Failure & Impact	Consequence of Failure			
	Negligible	Minor	Significant	Severe
Very likely	Low	Moderate	High	Extreme
Likely	Low	Moderate	High	High
Somewhat Likely	Low	Low	Moderate	Moderate
Unlikely	Low	Low	Low	Low

Works Priority

All the trees assessed achieve a tree risk rating and each tree will also achieve a timeframe (Works Priority) for the completion of any prescribed works. The timeframe specified to complete the work will be derived from the risk rating awarded to the individual tree.

The timeframe parameters we will provide are as follows: -

Urgent Priority: Tree assessed in Forestree and email/phone call to tree owner at assessment time requesting immediate works. Tree will be requested to be made safe within 12hrs of discovery.

High Priority: Tree assessed in Forestree; works should be undertaken as soon as practical.

Moderate Priority: Tree assessed in Forestree; works should be undertaken when practical, or when budget/pruning cycle allows.

Low Priority: Tree assessed in Forestree; works should be undertaken during next pruning cycle or retained and monitored; majority will not require work if they achieve this rating.

Visual Tree Assessment Methodology

Visual Tree Assessments (VTA) conducted by TreeSolve use a rating system to award any given tree its appropriate rating. VTAs are based following defined criteria. Specifically, a VTA must: -

- Locate and identify the tree/s to be assessed.
- Review existing site conditions and note any factors which may affect tree viability and or stability.
- Inspect the tree/s visually.
- Inspect the tree/s structure via the use of a probe, trowel and/or sounding hammer where applicable.
- Inspect the tree/s health either macroscopically or with binoculars where applicable.
- Assess and determine expected loads and/or change in load to tree parts of concern and/or interest.
- Record any matters of concern and/or interest specifically in relation to tree condition, likelihood of failure and recommend any remedial treatments and/or advance assessment if applicable.

Below are the primary attributes recorded during each VTA, and the tabulated data represents how each individual tree is awarded its individual attribute rating.

Health

Rating	Criteria Required
Good	Foliage density, colour, and size normal. Terminal dieback less than 5% of entire crown, almost no epicormic growth observed less than 5% of the entire crown. Tree should be actively growing, good internodal growth and/or flowering period evident. No evidence of pest and/or disease.
Fair	Foliage density, and size to be reduced, minor chlorotic foliage expected. Terminal dieback less than 40% of entire crown, moderate volume of epicormic growth ~40% of entire crown. Tree growth may appear slightly stunted and/or disrupted. Moderate evidence of pest or/and disease. Moderate chance of recovery utilising reasonable methods.
Poor	Foliage density and size to be substantially reduced, substantial chlorotic and/or necrotic foliage evident. Terminal dieback greater than 40% of entire crown, substantial volume of epicormic growth greater than 40% of entire crown. Tree growth may appear stunted, malformed, disrupted and/or non-existent. Substantial evidence of pest or/and disease. Highly unlikely for a tree to recover fully using reasonable methods, minor recovery may occur but will never return to optimal growth functionality.
Dead	Cellular division has ceased to occur, tree is not functioning, and all physiological processes have stopped with no chance of recovery.

TREESOLVE PTY. LTD.
ABN: 57 675 434 376

WWW.TREESOLVE.COM.AU

Page | 20

Structure

Rating	Criteria Required
Good	Root plate intact and with no signs of instability. Buttress formation evident and trunk taper normal. No unstable unions and/or history of branch failure. All unions well-formed and open, no evidence of decay, previous topping, lopping, or pollarding. Minimal overextension of the mid-upper crown and overall branch architecture well balanced. Improbable likelihood of failure within a 5-year timeframe.
Fair	Root plate intact and with minor signs of instability. Buttress formation evident, however not notable and trunk taper normal - abnormal. Stable included bark union/s and/or moderate history of branch/stem failure. Unions sub-optimal, minor-moderate evidence of decay, previous topping, lopping, or pollarding. Moderate overextension of the mid-upper crown and overall branch architecture sub-optimal. Possible likelihood of failure within a 5-year timeframe.
Poor	Root plate disturbed and with major signs of instability. Buttress formation not apparent, and trunk taper abnormal. Unstable included bark union/s and/or significant history of branch/stem failure. Unions acute, substantial evidence of decay, previous topping, lopping, or pollarding. Substantial overextension of the mid-upper crown and overall branch architecture a-typical and/or substantially exposed. Probable likelihood of failure within a 5-year timeframe.
Failed	Primary/secondary structure has either partially or totally failed and/or collapsed and/or separated. Imminent likelihood of failure within a 5-year timeframe.

Useful Life Expectancy

Rating	Criteria Required	
	Health	Structure
>50 years	Good	Good
>30 years	Good	Fair
>30 years	Fair	Good
<30 years	Fair	Fair
**<10 or <5 years	Poor	Fair or Good
**<10 or <5 years	Fair or Good	Poor
<5 years	Poor	Poor
*0 years	Dead	Failed

*If a tree achieves either a Dead or Failed rating then regardless of its remaining attributes its ULE will be 0 years unless extenuating circumstances deem it otherwise.

**Species dependant: certain species will have a shorter ULE if the structure or health is poor, in this case <5 years ULE may be applied.

TREESOLVE PTY. LTD.
ABN: 57 675 434 376

WWW.TREESOLVE.COM.AU

Ref: TAC0620_7_RiverSt_StPeters_TOMO
Date: 12th September 2025
Author: Peter Oates

Page | 21

Form

Rating	Criteria Required
Good	High aesthetic value which is consistent with the species at maturity and/or a striking example of the species. No evidence of phototropism and/gravitropism. No bias or history of major pruning events or history of branch/stem failure or health decline which would detract from the overall aesthetic value.
Fair	Moderate aesthetic value which is moderately consistent with the species at maturity and/or a normal example of the species. Minor evidence of phototropism and/gravitropism. Minor bias or history of major pruning events or history of branch/stem failure or health decline which would detract from the overall aesthetics.
Poor	Low aesthetic value which is not consistent with the species at maturity and/or is not an aesthetical example of the species. No evidence of phototropism and/gravitropism. Major bias or history of major pruning events or history of substantial branch/stem failure which would detract from the overall aesthetics.
Atypical	No aesthetic value or is a starkly different to a typical example of the species at maturity. This will often include trees which have extraordinary levels of phototropism and/gravitropism. Multiple examples of substantial pruning events or history of branch/stem failure which would detract from the overall aesthetics.

Age

Rating*	Criteria Required
Juvenile	Tree is less than 5 years old, often still staked/supported, and watered. Growth and response to change will be rapid, however very susceptible to abiotic and biotic factors.
Young	Tree is between 5-10 years old, should not be staked, but will often still be vulnerable to abiotic/biotic factors. Growth and response to change should still be highly adaptable and quick providing the growing conditions are suitable
Semi-mature	Tree is between 10-30 years old, will be established within its growing environment and will have gained reasonable trunk diameter and crown spread. Should not be susceptible to as many abiotic and/or biotic factors. Growth and response to change should be good-moderate.
Mature	Tree is between 30-80 years old, completely established, growth will be moderate and response to change will be slow-moderate dependent on species and tree condition.
Overmature	Trees is between 80-150 years old, will either begin or actively senescing. Branch failure may occur as retrenchment begins and the trees growth shifts to a static trait as opposed to a dynamic characteristic. Responses to change/growth slow, high levels of stress and/or change within its environment can be fatal.
Veteran	Tree is greater than 150 years old, has completed its retrenchment and overmature stage and is now concentrating its resource production into survival, structural adaptation, active growth has not ceased, however has drastically reduced. Stress and/or injury is highly likely to be fatal at this age range.
Dead	Cellular division has ceased to occur, tree is not functioning, and all physiological process have stopped with no chance of recovery

*The age ranges within each age class are highly dependent on tree species and condition, and this will factor into the tree's overall performance and growth, these criterions are a guide to estimating the age of a tree.

TREESOLVE PTY. LTD.
ABN: 57 675 434 376

WWW.TREESOLVE.COM.AU

Glossary

Abiotic: a tree disorder which is caused by a non-living and/or non-infectious factor.

Biotic: a tree disorder which is caused by a living and/or living organism.

Condition of Concern: Tree part with the highest potential for failure.

Consequence of Failure: Personal injury, property damage or disruption of activities due to tree failure or tree part failure.

Health: a visual representation of how the tree is performing in its environment, largely derived from foliage colour, density, and size.

Imminent: Failure has started or is most likely to occur in the near future, even if there is no significant wind or increased load. This is an infrequent occurrence for a risk assessor to encounter and may require immediate action to protect people from harm. The imminent category overrides the stated time frame.

Likelihood of Failure and Impact: The chance of tree failure occurring and impacting a target during a specified timeframe.

Likelihood of Failure: The chance of a tree or tree part failure occurring within the specified timeframe.

Likelihood of Impact: The chance of a tree failure impacting a target during the specified timeframe.

Mitigation: In Tree Risk management it refers to the reduction of risk.

Photosynthesis: The process where light energy is used to form glucose from water and carbon dioxide

Probable: Failure may be expected under normal weather conditions within the specified time frame.

Possible: Failure may be expected in extreme weather conditions; however, it is unlikely during normal weather conditions within the specified time frame.

Improbable: The tree or tree part is not likely to fail during normal weather conditions and may not fail in extreme weather conditions within the specified time frame.

Structure: visual assessment of the tree's structural attributes, derived from the tree's union, branch and trunk formation, tree stability and historic branch failure.

Target: People, Property, or activities that could be damaged, injured, or disrupted by a tree failure.

Transpiration: The process where water vapour is lost through the stomata within the leaves.

Useful Life Expectancy: expected number of years that the subject tree will remain alive (cell division occurs) and is considered to provide aesthetic and/or environmental benefit, this rating is derived from the structural and health ratings which the tree is awarded.

Vigour: the inherent genetic capacity of a tree to grow and perform vital physiological processes, a static characteristic.

Vitality: the ability the tree has to respond to stimulus within its environment, can differ significantly as this is a dynamic characteristic.

13.8 SCHEDULE OF COUNCIL MEETINGS FOR 2026

REPORT AUTHOR: Governance Officer
APPROVED BY: General Manager, Governance & Civic Affairs
ATTACHMENTS: A

PURPOSE OF THE REPORT

The purpose of this report is to present the draft 2026 Schedule of Ordinary Council Meetings and the proposed date for the January 2026 Ordinary Council meeting for the Council's approval.

BACKGROUND

Pursuant to Section 81 of the *Local Government Act 1999*, the Council is required to appoint the times and places for Ordinary Meetings of the Council.

Previously and most recently, at its meeting held on 6 November 2023, the Council resolved that Ordinary Meetings of the Council will be held in the Council Chambers, Norwood Town Hall, commencing at 7.00pm on the first Monday of each month, unless otherwise determined by the Council. In addition, the Council has determined that Council Meetings will conclude by 11.00pm.

In the event of a Public Holiday occurring on the first Monday of a month, historically the Council has determined that in such circumstances, all meetings regularly scheduled for the first Monday, will be held on the first Tuesday of the month, unless otherwise determined by the Council.

A draft Schedule of Meetings for 2026 has been prepared for consideration by the Council, based on the convention (ie previous Council resolutions), of conducting Council meetings on the first Monday of the month.

A copy of the Schedule of Meetings for 2026 is contained in **Attachment A**.

DISCUSSION

The current arrangements in respect to the scheduling of Council meetings has worked well and in order to ensure consistency and stability, it is recommended that this schedule be followed in 2026, with one (1) exception, that being, the date of the January 2026 Ordinary Council meeting.

To this end, in 2026 the proposed date for the January Council Meeting is 19 January 2026. As per the case in previous years, this provides for a two (2) week gap between the January Ordinary Meeting of the Council and the scheduled Ordinary Council Meeting in February.

The draft Schedule of Council Meetings for 2026, therefore includes Monday, 19 January 2026, as the recommended date of the first Ordinary Meeting of the Council for 2026, however this can be amended to reflect whatever date the Council determines.

During 2026, there are two (2) Ordinary Meetings of the Council which will be affected by a Public Holiday, namely, the April Council Meeting, which is the Easter Monday Public Holiday and the October Council Meeting, which is the Labour Day Public Holiday. Therefore, in keeping with past practice, indicates that the April Council Meeting will be held on Tuesday, 7 April 2026 and the October Council Meeting will be held on Tuesday, 6 October 2026.

OPTIONS

The Council can determine that the January 2026 Ordinary Meeting of the Council be held on Monday, 19 January 2026 and set the Schedule of Ordinary Council meetings as set out in the attached draft 2026 Schedule of Meetings or it can determine an alternative date for the January 2026 Council meeting and an alternative schedule for Council Meetings during 2026.

CONCLUSION

Determination of the times and places for ordinary meetings of the Council, will ensure compliance with the requirements of the *Local Government Act 1999* and enables these dates and times to be communicated to the community.

Consistency of approach to this issue is recommended.

RECOMMENDATION

1. *That the first Ordinary Meeting of the Council for 2026, be held on Monday, 19 January 2026, commencing at 7.00pm in the Council Chambers, Norwood Town Hall, 175 The Parade, Norwood.*
2. *That Council meetings that fall on a Public Holiday, be held on the first Tuesday of the month, in accordance with the draft 2026 Schedule of Council Meetings as contained in Attachment A, commencing at 7.00pm in the Council Chambers, Norwood Town Hall, 175 The Parade, Norwood.*
3. *That all other Ordinary Meetings of the Council be held on the first Monday of each calendar month, in accordance with the draft 2026 Schedule of Council Meetings as contained in Attachment A.*

2026 Schedule of Council Meetings

Day	Date	Time	Location
Monday	19 January	7.00-11.00pm	Council Chambers, Norwood Town Hall
Monday	2 February	7.00-11.00pm	Council Chambers, Norwood Town Hall
Monday	2 March	7.00-11.00pm	Council Chambers, Norwood Town Hall
Tuesday	7 April*	7.00-11.00pm	Council Chambers, Norwood Town Hall
Monday	4 May	7.00-11.00pm	Council Chambers, Norwood Town Hall
Monday	1 June	7.00-11.00pm	Council Chambers, Norwood Town Hall
Monday	6 July	7.00-11.00pm	Council Chambers, Norwood Town Hall
Monday	3 August	7.00-11.00pm	Council Chambers, Norwood Town Hall
Monday	7 September	7.00-11.00pm	Council Chambers, Norwood Town Hall
Tuesday	6 October*	7.00-11.00pm	Council Chambers, Norwood Town Hall
Monday	2 November	7.00-11.00pm	Council Chambers, Norwood Town Hall
Monday	7 December	7.00-11.00pm	Council Chambers, Norwood Town Hall

* Meeting re-scheduled to the first Tuesday of the month as the first Monday is a Public Holiday.

13.9 REPORT OF THE AUDIT & RISK COMMITTEE

REPORT AUTHOR: Manager Governance
APPROVED BY: General Manager, Governance & Civic Affairs
ATTACHMENTS: A-B

PURPOSE OF THE REPORT

The purpose of this report is to present the Council with the report and Minutes of the meeting of the Audit & Risk Committee held on 13 October 2025.

BACKGROUND

Section 126(8)(a) of the *Local Government Act 1999* (the Act) requires that a Council Audit & Risk Committee must:

'provide a report to the council after each meeting summarising the work of the committee during the period preceding the meeting and the outcomes of the meeting'.

To implement the above requirement and noting that the Council's Audit & Risk Committee (the Committee) undertakes its work during its meetings, the Committee resolved that the Committee's Work Plan will form the basis for such reports to the Council.

In addition to the above, this report also presents the Committee Meeting Minutes to the Council for noting and provides the opportunity for Council decisions based on recommendations from the Committee, where the matter has not been dealt with by way of a separate report to the Council.

STRATEGIC DIRECTIONS

CityPlan 2030 Alignment

Not Applicable.

FINANCIAL AND BUDGET IMPLICATIONS

Not Applicable.

RISK MANAGEMENT

The provision of this report to the Council ensures compliance with the Council's legislative obligations.

Supporting the Committee to meet its legislated purpose, functions and activities will provide the required independent assurance and advice to the Council.

CONSULTATION

Elected Members

Elected Members receive the Agenda and Minutes of the Audit & Risk Committee and consider recommendations made by the Audit & Risk Committee to the Council at Council meetings.

Community

Meetings of the Committee are open to the public to attend in accordance with legislative provisions

Staff

The preparation of the Work Plan which informs this report and the Committee Meeting agenda (with reports) is informed by collaboration between the Council's Governance and Finance Units.

Other Agencies

Not Applicable.

DISCUSSION

a. General Report

The current Work Plan of the Committee is contained within **Attachment A**.

A summary of the items which were considered by the Committee at its meeting held on 13 October 2025, is provided below.

The Committee received and noted the Council's Climate Risk Governance Assessment Report which led to discussion in terms of the Council's role in Resilient East, the consideration of integrating climate change adaptation requirements into Council operations as well as the commitment to climate change mitigation by aiming for 'Net Zero' carbon emissions by 2030.

The Committee noted the Council's 2025-2026 Budget Update report which was considered by the Council at its meeting held on 7 October 2025. This report assists the Committee to meet the requirements of Section 126(4)(f) of the Act which is to review the adequacy of the accounting, internal control, reporting and other financial management systems and practices of the Council on a regular basis.

Section 126(4)(c) of the Act requires that the Committee monitor the responsiveness of the Council to recommendations for improvement based on previous audits. A report providing an update on Previous External Audit Recommendations was therefore provided and noted by the Committee. It is intended that such updates will be provided on a twice-yearly basis and combined with updates on the progress of recommendations from previous Internal Audits.

The Committee received and noted a report regarding the 2024-2025 Audited Financial Statements for each of the Regional Subsidiaries of the Council, these being:

- Eastern Health Authority;
- Eastern Waste Management Authority;
- ERA Water; and
- Highbury Landfill Authority.

In addition, the Committee requested that Mr Jeff Tate, General Manager, ERA Water, be invited to attend the next meeting of the Committee, which will be held in February 2026, to present on ERA Water.

Section 126(4)(a) prescribes that one of the legislated functions of the Committee, is to review the Council's Annual Financial Statements to ensure they present fairly the state of affairs of the Council. The Committee therefore considered the Council's 2024-2025 Financial Results and recommended to the Council that the Annual Financial Statements for the year ended 30 June 2025 be adopted.

In addition, the Committee also noted the comparative analysis to the audited Annual Financial Statements and the Council's original adopted 2024-2025 budget as well as noting the 2024-2025 External Audit Completion Report.

The Committee resolved to go into confidence to facilitate the confidential discussion with the Council's External Auditor, Tim Mulhausler from Galpins Pty Ltd. In accordance with Regulation 17B of the *Local Government (Financial Management) Regulations 2011*, all staff present left the Meeting at that time until this discussion had concluded.

As required by Section 125A(2) and Section 126(4)(g)(i)(B) of the Act, the Committee received the Business Continuity Management Internal Audit Report. The Committee Members discussed the volume of work required and were advised that an update would be provided to the February 2026 Meeting of the Committee.

The Council's Chief Financial Officer provided a presentation of the 2026-2027 Budget process which included an overview of the key steps and timeline associated with the preparation of the 2026-2027 Budget and engagement with the Committee.

The final item of business for the Committee was to consider the 2026 Meeting Dates and Work Plan which were approved as presented with the incorporation of the bi-annual review of progress against previous External Audit and Internal Audit findings.

b. Minutes of the Audit & Risk Committee Meeting

The Minutes of the Committee Meeting held on 13 October 2025, including the reports presented are contained in **Attachment B**.

c. Recommendations to the Council

At the Meeting held on 13 October 2025, the Committee made a recommendation to the Council in relation to the Council's Annual Financial Statements as follows:

"that the Annual Financial Statements for the year ended 30 June 2025, as contained in Attachment B be adopted."

This recommendation has been included in the separate report on the Financial Results 2024-2025.

RECOMMENDATION

That the report be received and noted.

Audit and Risk Committee Work Plan 2024-2025							
Function and activity	LG Act Reference	Responsibility for agenda item	Supporting documents	Meetings

PURPOSE OF REPORT

The purpose of this report is to present the Council's *Climate Change Governance Assessment Report* to the Audit & Risk Committee.

BACKGROUND

The recognition of climate change risk has grown significantly in recent years, particularly organisational and investor financial and economic risks. A pivotal development in this regard, was the establishment of the Task Force by the G20 Financial Stability Board on Climate Related Financial Disclosure (TCFD) in 2015, in recognition of the risks that climate change present, particularly in relation to international financial and economic impacts. Initially, a voluntary framework for corporations to report on governance, climate change adaptation and transitional risks, the reporting framework and associated standards are now being widely adopted as legally binding requirements in many countries.

The Australian Government introduced legislation for mandatory climate related financial disclosure, through the Australian Sustainability Reporting Standards (ASRS) Framework Australian Accounting Standards Board Standard 2 (AASB S2) in January 2025, which is supported by the Australian Accounting Standards Board (AASB) and the Australian Auditing and Assurance Standards Board (AUASB). While this legislation is currently limited to entities covered by the *Corporations Act 2001*, it is an indication of the growing recognition of the significance placed on climate change as a material financial and economic risk and it demonstrates best practice approaches for climate reporting.

Typically, climate change risks are categorised into two broad categories, namely:

- Physical risk – risks caused directly by climate change, such as extreme weather events. For example, flooding or storm damage to Council owned infrastructure.
- Transitional risk – risks associated with the transition to a low carbon economy. For example, increasing cost and access to insurance of assets as a result of climate-related events.

To date, this Council's strategic response to climate change, has been driven initially through its membership of Resilient East, a regional climate initiative between State and Local Government (which includes all of the Eastern Region Alliance Councils and the City of Tea Tree Gully and the City of Adelaide) and through the Council's *Corporate Emissions Reduction Plan 2020 to 2030*.

Resilient East was established in 2006, through the Eastern Regional Alliance (ERA) councils, the City of Adelaide and City of Tea Tree Gully, in response to the State Government Climate Change Adaptation Framework (2012). The purpose of Resilient East is to ensure that the eastern region remains a vibrant, desirable and productive place to live, work and visit and that local businesses, communities and environments can respond positively to the challenges and opportunities presented by a changing climate.

The climate in South Australia is already experiencing the impacts of climate change, including more intense storms, flooding and heatwaves. As the climate continues to change, the impacts will become increasingly acute and present greater challenges to this Council's ability to adapt and support our community.

One of the goals of Resilient East is to increase member councils' understanding of climate change governance and capacity building on climate change adaptation and transition risks. Resilient East focuses on adapting to the already locked-in climatic changes to build resilience, reduce climate-related impacts and create a prosperous future for the region.

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.1

In 2019, the Council developed a Risk Assessment tool that was prepared by Bentleys, which identified twenty-one (21) strategic Corporate Risks facing the organisation. Risk No. 7 was "Climate change not in key decisions", which was described as "inadequate consideration of Climate Change Adaptation in key Council decisions and forward planning". Not adequately planning for climate change was assessed as having a medium inherent risk rating, with controls such as the Council's participation in the regional adaptation partnership of Resilient East, this reduced the residual risk rating to low.

Risks associated with climate change governance were raised through Resilient East, which resulted in the member councils undertaking Climate Risk Governance Assessment processes.

The Climate Change Governance Assessment (the Assessment) was completed in January 2024 reviewed and benchmarked how this Council embeds climate change and associated risk into its existing governance frameworks and provides recommendations to enhance climate governance across the Council and achieve best practice climate risk management.

A copy of the Council's *Climate Change Governance Assessment Report* is contained in **Attachment A**.

RELEVANT STRATEGIC DIRECTIONS & POLICIES

Climate change governance and risk management, fits under *CityPlan 2030* Outcome 4: Environmental Sustainability Objective 4.4 *Mitigating and adapting to the impacts of climate change*.

FINANCIAL AND BUDGET IMPLICATIONS

Not Applicable.

EXTERNAL ECONOMIC IMPLICATIONS

The physical and transitional risks of climate change have a range of potential economic implications for the City of Norwood Payneham & St Peters. These risks could directly affect the Council's operations and service delivery (e.g. costs associated with infrastructure damage resulting from increased frequency of extreme weather events) or result in indirect consequences from broader impacts on our community and its economic prosperity and resilience (e.g. exacerbating cost of living pressures caused by impacts of increased frequency of extreme weather events and associated infrastructure and insurance costs).

SOCIAL ISSUES

Climate change poses a range of community and social risks, particularly impacting the most vulnerable in our community. For example, extreme heat and extreme weather events disproportionately affect vulnerable people, such as older people and those with pre-existing health issues, exacerbating socio-economic disparities.

The Council is responsible for a range of socially based services that intersect with and are impacted by climate change, including aged care support, volunteer coordination, libraries and other community facilities as well as the maintenance and development of open space to support social and community activity.

CULTURAL ISSUES

Not Applicable.

ENVIRONMENTAL ISSUES

The environmental impacts of climate change include impacts on natural systems and biodiversity through changes to the climate and extreme weather events. The Council's management of open space natural assets and street trees will need to adapt, through changes to monitoring and maintenance regimes and species selection and diversity.

RESOURCE ISSUES

Not Applicable.

RISK MANAGEMENT

Climate change risks have, to some extent, previously been identified through the Resilient East Integrated Vulnerability Assessment (IVA) and subsequent Climate Change Adaptation Plan (2016). However, no specific risk assessment has been undertaken of the Council's operational context and activities.

This Council's participation in the LGRS Strategic Risk Services Program which is currently underway will ultimately result in organisational wide Strategic Risk Register and an Operational Risk Register and embed supporting processes across the Council's operations and strategic planning, to ensure a comprehensive risk management system can be sustainably maintained.

To date, this Program has resulted in the adoption of a Risk Management Policy by the Council on 4 August 2025 and the development of a Strategic Risks Register. Work is still underway on the development of an Operational Risks Register and on embedding the registers into the Council's operations.

CONSULTATION

- **Elected Members**
An Elected Members Information Briefing Session was held on 22 September 2025, outlining the results of the Assessment and the next steps for building capacity around climate governance using LGA SA developed workshop materials.
- **Community**
Not Applicable.
- **Staff**
All Managers and subject area specialists were invited to participate in internal workshops conducted by the consultant.
- **Other Agencies**
Not Applicable.

DISCUSSION

The Climate Change Governance Assessment (the Assessment) has been conducted using the *InformedCity* Governance Tool which enables users to understand the extent that climate change is considered in the corporate operations and governance of local government.

The Assessment tool developed in Australia has been used to assess the climate-related governance of over 350 local government authorities in Australia and New Zealand. The process is designed to facilitate informed decision-making and enable public disclosure of climate risk, comparative analysis and community of practice.

The Assessment used a combination of qualitative and quantitative approaches, including a staff wide survey, key documentation review and a series of face-to-face team interviews.

The quantitative component of the Assessment resulted in a rating against 14 core indicators of climate change governance as outlined in Table 1 below using a 5-point scale from None, defined as "No published documents related to an indicator on the website", through to Advanced, defined as "A comprehensive inclusion of climate change."

Table 1 below provides the results of where the City of Norwood Payneham & St Peters was assessed based on those indicators in 2023.

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.1

TABLE 1: RESULTS OF THE CLIMATE CHANGE GOVERNANCE ASSESSMENT

Indicator	Importance for Climate Governance	2023 Council Assessment
1 Strategic Planning	Directs how decision-makers in councils must discharge their responsibility under their State's Local Government Act.	High
2 Financial Management	Effects of climate change are likely to have a considerable impact on a council's financial performance. In addition, mandatory reporting for corporations through the AASB ASRS will affect local governments indirectly, if not directly.	None
3 Public Risk Disclosure	Increasing demand in the private sector for a transparent approach to addressing climate-related risks means councils can expect insurers and financial providers to request public disclosure of how they are addressing these risks.	Intermediate
4 Risk Management	Climate change is a complex issue that will exacerbate existing risks and present new ones.	None
5 Asset Management	Assets maintained by councils may have long life-expectancy and as such may be exposed to direct and indirect climate risks. This has the potential to generate unexplored or under-quantified financial risk for local government.	High
6 Procurement	Procurement plays an important role in transitioning to a net-zero, climate resilient future through reduction in emissions through design and the stimulation of the market for low-carbon technologies, products, and services.	None
7 Community Wellbeing	The negative impacts of climate change on community wellbeing will likely lead to increased demand on council services and/or ability for the community to contribute (via rates or voluntary support)	Basic
8 Land Use Planning	Strategic and local planning decisions can both increase and decrease the exposure of human settlements to climate change impacts. Effective planning can support climate-resilient and low-energy development.	Intermediate
9 Natural Environment	Local governments play a key role in supporting the natural environment which provides ecosystem services and can greatly support adaptation to climate-related risks and mitigation of emissions.	Intermediate
10 Emergency Management	Adaptation has numerous supporting benefits for emergency management including the implementation of risk planning for disaster mitigation and preparedness, response capacity and minimising exposure to reoccurring situations.	None
11 Climate Change Policy	An internal climate change policy (or corporate standard/statement of intent) allows local governments to place a climate change lens over all the council's activities and use the existing system to drive adaptation, risk minimisation and transition to a lower-carbon economy.	No data
12 Adaptation Planning	Best practice adaptation plans identify the actions required to mitigate specific risks and have mechanisms in place to respond to physical, transitional and liability risks. It helps set KPIs and establish roles and responsibilities.	High
13 Transition Planning	A transition plan publicly unpacks councils' responses as they adjust to a low-carbon and resilient organisation and community and provides transparency for key stakeholders such as communities, businesses and utilities.	Basic
14 Carbon Target	Climate change mitigation actions allow for the exploration and promotion of resilient energy systems and passive solar design that may reduce human health-related issues as well as energy savings. Climate change adaptation will also likely need to occur in a carbon-constrained economy.	Advanced

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.1

The qualitative component of the Assessment, considered the effectiveness of a range of additional governance criteria, in terms of how effectively climate change considerations are embedded in operational matters including oversight (the process by which the organisation monitors and oversees progress against goals and targets for addressing climate-related issues), information systems for storing, analysing and visualising climate-related data, climate risk assessments, climate legal risk, metrics, staff / resource allocation, community / stakeholder engagement and institutional / intergovernmental relationships.

The Assessment process then aggregated the individual indicator and criteria results into an overarching governance assessment using the categories detailed in Table 2 below.

TABLE 2: CLIMATE CHANGE GOVERNANCE ASSESSMENT BY CATEGORY

Status	Measure	Description
Leader	13-14 'High' and/or 'Advanced' indicators	The Council has public and active monitoring and evaluation of climate-related risks and opportunities, and these shape the whole of organisation direction. Climate change is integrated into the organisation, with improvements likely to arise over time as a result from strategic planning shifts, a reduction in exposure to climate risk and full transparent disclosure of responses.
Integrator	9-12 'High' and/or 'Advanced' indicators	The Council is on the cusp of full integration of climate change into its organisation. Climate change is likely to shape numerous decisions in council, but not completely shape strategic direction.
Responder	5-8 'High' and/or 'Advanced' indicators	The Council has recognised climate change as an issue and is actively responding. Full integration is likely to be limited by a full understanding of the extent of the financial risk, resourcing, management and/or elected member support.
Seeker	1-4 'High' and/or 'Advanced' indicators	The Council is likely to have one or more climate champions who are actively leading change but are yet to be received by all areas of executive management.
Starter	No 'High' and/or 'Advanced' indicators	The Council may have some consideration of climate change, but this is most likely to be driven by regulatory requirements or from staff (not executive management) leadership.

Based on this process, the Council has been identified as attaining the 'Seeker' status, as highlighted in green above. This status highlights the fact that although the Council has a solid recognition of the issues related to climate change, there is still room for improvement in its governance structure to enable full integration and embedment of climate change into "business as usual".

The Assessment identified that the City of Norwood Payneham & St Peters has a 'solid foundation of climate change governance'. The Council's climate related governance strengths identified in the analysis include the following:

- A solid recognition of the issue, with climate change considered throughout many of the Council's governance documents and mechanisms.
- Demonstration of leadership via the setting of a zero emissions corporate target.
- Strong inclusion of climate change in the Council's Strategic Management Plan, *CityPlan 2030* and a willingness of staff to improve strategic management and oversight of climate-related issues.

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.1

The Assessment also identified areas of the Council's governance arrangements that do not adequately incorporate climate change considerations, to an extent that this is likely to inhibit effective responses to climate change. The key gaps identified in the governance assessment are:

- Climate change is inadequately captured in financial management mechanisms.
- No specific Climate Change Policy.
- Council has not yet tested how climate change may affect its strategic planning, via the use of integrated scenario narratives.
- No consideration of climate change in procurement.

The Assessment provides recommendations for each of the quantitative and qualitative indicators. From these, a selection of priority recommendations were identified, which focus on strengthening the foundations of climate risk management in the Council's governance arrangements.

The priority recommendations as outlined in the report are:

1. Climate change policy – Developing a Council climate change policy supported by a climate change implementation plan to provide a robust and consistent response to climate-related issues.
2. Capacity building – Allocating additional resources to support the upskilling and information needs of those in risk and financial management to ensure that they can respond to the rapidly emerging changes in the regulatory and market environment.
3. Quantifying risks – Quantifying the potential exposure to climate-related risks. The scope of climate risk assessments will need to incorporate both physical and transition risks and should, where possible, look to analyse risks using both qualitative and quantitative (monetary terms) approaches. This will assist in the improved consideration of climate change in financial governance mechanisms. The quantification of some risk metrics will also help the Council to monitor and evaluate progress and help drive a targeted response to climate risks to the Council's assets.
4. Metrics dashboard – consider development of a dashboard that tracks key climate-related metrics.

Staff are currently assessing what the allocation of additional resources, as outlined in Recommendation 2, would entail for this Council.

Since the completion of the Assessment, staff have been working to embed climate change into the organisation to align with the recommendations and key priorities outlined above. That said, implementation of the Assessment recommendations was held in abeyance in 2024, to allow for integration of the climate change risks into the Council's participation in the LGRS Strategic Risk Services Program.

It is expected that Recommendation 1 will be addressed by embedding climate change across all Council policies and strategies rather than through the creation of a standalone Climate Change Policy. Recommendations 3 and 4 are being addressed through the LGRS Strategic Risk Services Program, the Resilient East Climate Action Plan (RECAP) project and through work that staff are currently undertaking to identify key performance indicators and metrics for reporting. Recommendation 2 will be addressed through a series of Climate-risk capacity building sessions run in-house for Elected Members and relevant staff.

Table 3 below outlines the actions that have occurred since the Climate Change Governance Assessment was completed against each of the core indicators as well as the preliminary next step actions that will occur.

**TABLE 3: 2025 UPDATES AND NEXT STEPS FOR EACH CORE INDICATOR OF THE CLIMATE
CHANGE GOVERNANCE ASSESSMENT**

Indicator	2023 Assessment	2025 Update	Next Steps
1 Strategic Planning	High	Updated Asset Management Plans incorporate climate considerations	Resilient East RECAP Project will investigate aligning Council Reporting with ASRS AASB S2 Framework. Climate-risk and Sustainability will be further embedded into Council policies and strategies as these are reviewed. Council staff working to develop organisation-wide key performance indicators and metrics for regular monitoring and reporting.
2 Financial Management	None	No change	Resilient East RECAP Project will investigate aligning Council Reporting with ASRS AASB S2 Framework.
3 Public Risk Disclosure	Intermediate	Risk Management Policy now in place and available on website.	Resilient East RECAP Project will investigate aligning Council Reporting with ASRS AASB S2 Framework. Staff are developing key performance indicators and metrics for annual reporting.
4 Risk Management	None	Risk Management Policy now in place and available on website. Strategic Risk Register now under development.	Resilient East RECAP project will include a regional Council Operations and Community Risk Assessment. Developing an Operational Risk Assessment as part of the LGRS Strategic Risk Services Program Embedding use of risk registers into all decision-making processes.
5 Asset Management	High	Updated Asset Management Plans (2024) incorporate climate considerations.	Continue to embed sustainability and climate-related risks into Asset Management Plans and Asset Management Contracts.
6 Procurement	None	Procurement Policy updated to include following outcome: "integrate principles of waste minimisation and carbon reduction".	Work with staff to ensure climate and sustainability is included in procurement processes including assessment criteria and sustainability assessment tools.
7 Community Wellbeing	Basic	No Change	New Public Health Plan due to be developed. Consider incorporating Sustainability and Climate actions into new plan.
8 Land Use Planning	Intermediate	Updated Greater Adelaide Regional Plan includes data for understanding the spatial impacts of projected changes due to climate change.	Continue to advocate for Planning & Design Code changes to align with better climate change management.
9 Natural Environment	Intermediate	No Change	
10 Emergency Management	None	No Change	
11 Climate Change Policy	No data	No Change	Instead of a standalone Climate Change Policy, climate-risk and sustainability will be further embedded into Council policies and strategies as they are renewed.
12 Adaptation Planning	High	No Change	Resilient East is currently working on RECAP, the updated 5-year plan.

CONCLUSION

The recommendations contained in the Climate Change Governance Assessment Report provide a quantitative and qualitative benchmark from which to build more robust climate change governance, which improves the identification, integration and management of climate change risks.

The Assessment identifies specific climate focused initiatives as well as a range of improvements to broader existing Council mechanisms, processes and practices that are fundamental to ensuring that climate change risks can be effectively identified and managed into the future. While strengthening climate governance requires specific climate focused initiatives, in many respects, improving climate governance is facilitated by improvements to existing Council systems and processes that underpin a range of council functions, for example, improvements to information systems, such as GIS.

Building on the previous Regional Action Plan (2016) and assessments undertaken by each Council, Resilient East Councils are currently participating in a joint process to develop a new Resilient East Climate Action Plan (RECAP). This process will involve a regional council operations and community risk assessment, a gap analysis against the ASRS AASB S2 Framework to identify the features relevant to the local government sector and how Council can meet the reporting requirements, and the development of a 5-year Climate Action Plan using latest climate data and community knowledge to build on strengths and focus on where the regional partnership can make the most impact on reducing climate risks together in Eastern Adelaide. This project is currently being tendered by Resilient East.

Given its far-reaching impacts, ensuring that the City of Norwood Payneham & St Peters is equipped to meet the challenges posed by climate change, requires a robust governance framework that ensures that climate change related risks and considerations are embedded into Council's organisational policies, processes and practices.

The work that is currently being undertaken with the LGRS Strategic Risk Services Program to embed effective risk management processes across the organisation to support the application of the Council's Risk Management Framework, will address many of the recommendations in terms of managing climate change related risks. Future reporting on the management of climate change risks will be incorporated into the regular risk management reporting to the Audit & Risk Committee based on the Council's Strategic and Operational Risk Registers.

5.2 REPORT OF THE 2025-2026 FIRST BUDGET UPDATE

REPORT AUTHOR:	Chief Financial Officer
GENERAL MANAGER:	Chief Executive Officer
CONTACT NUMBER:	8366 4548
FILE REFERENCE:	
ATTACHMENTS:	A

PURPOSE OF REPORT

The purpose of this report is to present the 2025-2026 First Budget Update report to the Audit & Risk Committee (the Committee) which was considered at the Council Meeting held on Tuesday 7 October 2025.

DISCUSSION

This report is provided to assist the Committee to meet the requirements of Section 126 (f) of the *Local Government Act 1999* (the Act), which provides that one of the functions of the Committee is:

'reviewing the adequacy of the accounting, internal control, reporting and other financial management systems and practices of the council on a regular basis.'

The purpose of the Budget Review is to provide the Council with a summary of the forecast Budget position for the year ended 30 June 2026, following the First Budget Review. The forecast is based on the year-to-date 30 June 2025 results.

Pursuant to Section 123 (13) of the Act, the Council must, as required by Regulation 9 of the *Local Government (Financial Management) Regulations 2011*, reconsider its annual business plan or its budget during the course of a financial year and, if necessary or appropriate, make any revisions.

A copy of the 2025-2026 First Budget Update as presented to the Council is contained in **Attachment A**.

RECOMMENDATION

That the report be received and noted.

Mayor Bria moved:

That the report be received and noted.

Seconded by Ms Tami Norman and carried.

5.3 UPDATE ON PREVIOUS EXTERNAL AUDIT RECOMMENDATIONS

REPORT AUTHOR:	Chief Financial Officer
GENERAL MANAGER:	Chief Executive Officer
CONTACT NUMBER:	8366 4548
FILE REFERENCE:	
ATTACHMENTS:	Nil

PURPOSE OF REPORT

The purpose of this report is to present the Audit & Risk Committee with an update on the actions that have been taken in respect to recommendations of the previous audits raised by the Council's External Auditor, Galpins.

BACKGROUND

Section 125 of the *Local Government Act 1999* (the Act), requires that the Council must ensure that appropriate policies, practices and procedures of internal control are implemented and maintained in order to assist the Council to carry out its activities in an efficient and orderly manner, to achieve its objectives, to ensure adherence to management policies, to safeguard the Council's assets and to secure (as far as possible) the accuracy and reliability of Council records.

Pursuant to Section 129 of the Act, in addition to providing an opinion on a Council's Financial Statements, the Council's Auditor must provide an audit opinion regarding the Council's Internal Controls.

Section 126(4)(c) requires that the Audit & Risk Committee (the Committee) has a legislated function to monitor the responsiveness of the Council to recommendations for improvement based on previous audits.

It should be noted that the Audit Opinion is restricted to Financial Controls as set out in Section 129 of the Act and relate to the Internal Controls that have been exercised by the Council during the 2024-2025 financial year in respect to the receipt, expenditure, investment of money, the acquisition and disposal of property and incurring of liabilities.

This report provides an update on the 2023-2024 Audit Completion report recommendations of the audit that required improvement.

DISCUSSION

As advised previously, the External Auditors have issued an unqualified Audit Report on the Annual Financial Statements for the financial year ended 30 June 2024.

Pursuant to Section 129 (4) of the Act, the Auditors are required to provide to the Council, in writing, details of any recommendations for improvement arising from the External Audit.

The Council's responsiveness to recommendations arising from previous audits and risk assessments, including those raised by the Council's External Auditor, is actively monitored and reported to the Audit & Risk Committee.

Progress on the implementation of each of the recommendations is regularly reviewed to ensure that identified risks are effectively mitigated and that improvement opportunities are actioned within reasonable or agreed timeframes. Where risks cannot be fully eliminated, these are carefully assessed and if no further treatment is feasible, are formally accepted in line with Council's Risk Management Framework. The current status of each recommendation from the 2023-2024 Financial Year statutory audit, including those that have been completed, in progress, or pending, is summarised in Table 1 Below.

City of Norwood Payneham & St Peters

**5.4 REGIONAL SUBSIDIARIES – AUDITED FINANCIAL STATEMENTS FOR THE YEAR ENDED
30 JUNE 2025**

REPORT AUTHOR: Chief Financial Officer
GENERAL MANAGER: Chief Executive Officer
CONTACT NUMBER: 8366 4549
FILE REFERENCE:
ATTACHMENTS: A - D

PURPOSE OF REPORT

The purpose of this report is to present the 2024-2025 Audited Financial Statements for the Regional Subsidiaries of which the Council is a Member.

BACKGROUND

Clause 28 of Schedule 2 of the *Local Government Act 1999* (the Act), prescribes that a Regional Subsidiary must provide a report to each Constituent Council for the preceding financial year which incorporates the Subsidiaries Audited Financial Statements. This report must be incorporated into the Annual Report of each constituent Council.

The Audited Financial Statements for each of the Regional Subsidiaries of which the Council is a Constituent Member, have been prepared in accordance with the *Local Government (Financial Management) Regulations 2013*.

Section 126(4)(f) of the Act requires that the Committee review the adequacy of the Council's accounting, internal control, reporting and other financial management systems and practices, on a regular basis. Presenting the Regional Subsidiary Audited Financial Statements to the Committee assists the Committee to undertake this function.

The Council will receive the Regional Subsidiary Audited Financial Statements at the Council Meeting scheduled to be held on 3 November 2025.

The following Audited Financial Statements are attached to this report as follows:

- Eastern Health Authority Inc. as contained in **Attachment A**;
- Eastern Waste Management Authority Inc as contained in **Attachment B**;
- ERA Water as contained in **Attachment C**; and
- Highbury Landfill Authority Inc. as contained in **Attachment D**.

RELEVANT STRATEGIC DIRECTIONS & POLICIES

Not Applicable.

FINANCIAL AND BUDGET IMPLICATIONS

There are no financial and budget implications resulting from the preparation of this report.

The financial performance of the Regional Subsidiaries of which this Council is a Member, one accounted for in the Council's Annual Financial Statements which are submitted concurrently.

The Council has included in its reported Operating Surplus, based on the respective ownership shares as detailed in Table 1, a Net Income associated with its Regional Subsidiaries of \$12,874 (2023-2024: \$295,047 Net Loss).

DISCUSSION

Table 1 below sets out the Net Surplus (Deficit) of the respective Regional Subsidiaries for the year ended 30 June 2025, together with the Council's share of the Operating Result which has been accounted for in the Council's 2024-2025 Financial Statements.

TABLE 1: REGIONAL SUBSIDIARY NET SURPLUS/ (DEFICIT)

Regional Subsidiary	Net Surplus / (Deficit)	Councils Share of Net Operating Surplus / (Deficit)	
		Percentage	\$
Eastern Health Authority	191,892	28.12%	53,956
Eastern Waste Management Authority	274,000	12.50%	34,250
ERA Water	(585,102)	33.33%	(195,034)
Highbury Landfill Authority	296,607	40.36%	119,702

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.4

Important points to highlight resulting from the 2024-2025 Financial year are:

- **Eastern Health Authority**

The Eastern Health Authority Inc. reported an Operating Surplus of \$199,496. The Authority reported lower User Charges during the year primarily related to lower worksite immunisation and food auditing fees due to fewer worksites, fewer participation in immunisation and a decrease in billable audit hours. This decrease in income was offset by an increase in investment income due to higher cash deposits held and sundry income due to an insurance claim.

During the year, the Authority reported lower Employee Costs as a result of periodic staff vacancies. The Authority also wrote-off Bad and Doubtful Debts of \$47,361 relating to unclaimed fines and inspection fees from prior years. The Authority's Right of Use Asset and Lease Liability calculation was updated in the financial year, to reflect the new building lease entered in January 2025. The life of the lease was extended to reflect the new lease agreement which resulted in the lease liability and Right of Use asset increasing and the corresponding annual Depreciation and Interest recognition (Finance costs) being affected by the new lease conditions.
- **Eastern Waste Management Authority**

The Operating Income Statement shows a year end Net Surplus of \$274,000, which is primarily attributed to higher income User Charges. The higher User Charges are related to higher waste processing and collection income (by \$2.605 million) and higher Other income relating to Bin supply and replacement (by \$511k) partially offset by increase in Bin Service Costs, Waste Processing Costs and Maintenance Costs.

During the year East Waste's Fleet Maintenance Costs increased by \$124,000 as a result of a number of significant breakdowns coupled with bringing the fleet replacement program back in line. This was offset by decreased spending on fuel expenditure by \$200,000 due to a favourable and stable diesel cost per litre during the year.

The cash balance at the end of the financial year 2024-2025 shows a net increase of \$88,000, noting higher than anticipated Debtors as at 30 June 2025 as a result of invoice timing and payments by members. The Authority reported that the end of the year 2024-2025 is relatively stable and remains at a level that the Administration is comfortable with.
- **ERA Water**

During 2024-2025 irrigation season, South Australia experienced another very dry year, with rainfall of 299mm against a long-term average of 537mm, leading to the second highest volume of water sales (281.4ML) by ERA Water. The highest volume of water sales being 316.7ML in 2023-2024, which was also a particularly dry year.

ERA Water reported an Operating Deficit of \$585,102 for the financial year 2024-2025 (Operating Deficit 2023-2024 \$611,161). ERA Water reported higher User Charges and Other Income due to higher water sales including annual supply charges from Constituent Councils as a result of dry conditions and income from insurance claim for repairs undertaken during the year.

ERA Water also reported a reduction in its Employee Costs offset by an increase in Professional Services during the year due to the changeover from direct employment to contractual based support services. During the year, ERA Water reported higher as average interest rates were higher compared to prior year albeit with a small reduction in total borrowings.

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.4

- Highbury Landfill Authority Inc. The Highbury Landfill Authority Inc. reported an Operating Surplus of \$296,607. The surplus was primarily due release of Provision (\$474,187) to the Profit & Loss Statement as a result of remeasurement adjustments. The Authority has an ongoing obligation to manage the post-closure phase for the landfill in accordance with the South Australian Environment Protection Authority (SA EPA) Guidelines. The minimum post-closure period is 25 years that commenced on 1 July 2009. A provision for the Highbury Landfill has been accrued. A net present value (NPV) calculation has been made by estimating cashflows to manage the Highbury site as set out in the SA EPA Guidelines. The cash outflows have been escalated at an inflation forecast of 2.1% per annum (2024:3.8%) and the discount rate used is equivalent to the 10 year Commonwealth Bond indicative rates as at 30 June 2025. This NPV calculation has been incorporated into the provision and represents the Authority's best estimate of its future liability to manage the Highbury Landfill post-closure phase.

OPTIONS

Not Applicable. This report is presented for information purposes only.

CONCLUSION

The financial performance of the Regional Subsidiaries of which this Council is a Constituent Member, is accounted for in the Council's Annual Financial Statements which are submitted concurrently.

The Council has included in its reported Operating Surplus, based on the respective ownership shares as detailed in Table 1, a net income associated with its Regional Subsidiaries of \$12,874 (2023-2024: \$295,047 net loss).

RECOMMENDATION

That the report be received and noted.

Mayor Bria moved:

1. *That the report be received and noted.*
2. *That Mr Jeff Tate, General Manager, ERA Water, be invited to attend the next meeting of this Committee and present on ERA Water.*

Seconded by Mr Kym Holman and carried unanimously.

5.5 FINANCIAL RESULTS 2024-2025

REPORT AUTHOR:	Chief Financial Officer
GENERAL MANAGER:	Chief Executive Officer
CONTACT NUMBER:	8366 4548
FILE REFERENCE:	
ATTACHMENTS:	A - C

PURPOSE OF REPORT

The purpose of this report is to present the Audit & Risk Committee with the Council's 2024-2025 Audited Financial Statements for review. In addition, a report comparing the Council's Audited Financial Result to the 2024-2025 Adopted Original Budget and the 2024-2025 Audit Completion Report prepared by the Council's Auditors is provided for information.

BACKGROUND

As required by Section 127 of the *Local Government Act 1999* (the Act), the Council must prepare Annual Financial Statements in accordance with the *Local Government (Financial Management) Regulations 2011* (the Regulations).

Pursuant to Section 126(4)(a) of the Act, the Audit & Risk Committee (the Committee) is required to review the Council's Annual Financial Statements to ensure that the statements present fairly the state of affairs of the Council.

Regulation 10 of the Regulations requires the Council to prepare and consider a report, no later than 31 December in each year, showing the Audited Financial results for the previous financial year, compared with the Estimated Financial results set out in the Budget, presented in a manner consistent with the Model Financial Statements.

Relevant to the role of the Committee to provide independent assurance and advice to the Council on accounting, financial management, internal controls, risk management and governance matters, as prescribed in Section 126(1a) of the Act, the above report and the 2024-2025 Audit Completion Report are presented to the Committee for information and review.

The Council's 2024-2025 Financial Statements comparing the actual result to the 2024-2025 Adopted Original Budget are contained in **Attachment A**.

The Council's 2024-2025 Audited Financial Statements are contained in **Attachment B**.

The 2024-2025 Audit Completion Report prepared by the Council's Auditors, Galpins, is contained within **Attachment C**.

RELEVANT STRATEGIC DIRECTIONS & POLICIES

The financial information contained in this report is based on the 2024-2025 Annual Financial Statements, the 2024-2025 Adopted Budget and the various policies adopted by the Council as these impact the Council's financial performance (eg. Rating Policy).

FINANCIAL AND BUDGET IMPLICATIONS

The 2024-2025 financial results reflect a stronger operating position, with income growth outpacing expense increases and delivering an Operating Surplus of \$2.30 million (3.9% of income). This improvement was supported by higher rates revenue, increased grant funding and modest growth in non-rate income, offset by higher employee, depreciation and finance costs. Significant investment of \$43.63 million (excluding grants received specifically for new or upgraded assets) in capital projects was undertaken, with a strong focus on new infrastructure, while some renewal works were deferred to align with project delivery timeframes. Key Financial Indicators highlight a positive operating performance, though Net Financial Liabilities increased due to new borrowings and the asset renewal funding ratio fell below target, reflecting timing adjustments in renewal expenditure. Overall, the Council remains in a sound financial position, while continuing to balance operational needs, service delivery, and investment in community infrastructure.

Compared with the Adopted Budget Operating Surplus of \$229,418, Council's 2024-2025 financial results report a significantly higher operating surplus of \$2.301 million. The variance was predominantly due to the delay in advancement of 85% of the *Federal Government 2024-2025 Financial Assistance Grant* which was due to be received on 28 June 2024. The Grant, totalling \$1.267 million, was received by the Council on 1 July 2024 and therefore, recognised in the 2024-2025 financial year.

Details of the main drivers of the variances between the 2024-2025 Actual Results and Operating Surplus forecasted in the Adopted Original Budget, are contained in the Discussion Section of this report.

After Capital Items, the Council is reporting a Total Comprehensive Income of \$66.955 million against an Adopted Net Surplus of \$11.697 million, with the favourable variance being driven by revaluation of Infrastructure, Property, Plant & Equipment.

DISCUSSION

The 2024-2025 Annual Financial Statements have been finalised, providing Council with a comprehensive assessment of its financial performance for the year. This report not only compares actual results against the Adopted Original Budget and identifies year-on-year (YoY) variances, but also highlights key achievements, explains material variances, and assesses the implications for Council's financial sustainability. The analysis offers valuable insights into how effectively the Council has managed its resources, balanced operational and capital priorities, and positioned itself to meet future service delivery and infrastructure needs.

FINANCIAL PERFORMANCE 2024-2025 vs ORIGINAL ADOPTED BUDGET 2024-2025

The 2024-2025 Actual Results are compared to the Original Adopted Budget, as presented in Table 1 and further detailed in **Attachment A**.

TABLE 1: FINANCIAL PERFORMANCE 2024-2025 vs ORIGINAL ADOPTED BUDGET

	Budget 24/25	Actuals 24/25	B vs A variance	B vs A variance
	\$'000	\$'000	\$'000	%

Assets Renewal Funding	170.1%	82.9%	(87.2%)	

Statement of Comprehensive Income

Operating Income & Expenses

The Council delivered an Operating Surplus of \$2.301 million, compared to the Adopted Budget, with forecasted Operating Surplus of \$229,418, which resulted in a favourable variance of \$2.072 million. The major variances (over 5%) from the Adopted Operating Surplus are outlined in Table 2 below.

TABLE 2: MAJOR VARIANCES FROM ADOPTED OPERATING SURPLUS

	Reasons for the Variance	Amount (\$)
INCOME		
Statutory Charges	Statutory Charges were Favourable to the Budget mainly due to higher income derived from Development Assessment fees and Hoarding Licences. This is a result of an increase in both the number Development Applications that have been lodged and approval of more Hoarding Licences for major development projects in the City.	286,355
Grants, subsidies & contributions: Operating	Grant funding received was Favourable to the Adopted Budget due to the delay in receipt of the advance payment for the <i>Financials Assistance Grant for 2024-2025 by the Commonwealth Government</i> , which was expected to be received in June 2024 but received in the 2024-2025 financial year.	1,166,392
Grants, subsidies & contributions: Capital	Grant funding received was Unfavourable to the Adopted Budget due to the timing of the <i>Local Roads and Community Infrastructure (LRCI) Grant</i> .	(177,757)
Investment Income	Investment Income was Unfavourable to the Budget driven primarily by lower interests earned on the Councils deposits with the Local Government Finance Authority (LGFA).	(67,419)
Other Income	Other Income was Favourable to the Adopted Budget driven primarily by: - Local Government Risk Services (LGRS) insurance rebates being higher than forecast, - Receipt of Local Government Finance Authority's annual bonus payments calculated in relation to the average deposit and loan levels held during the financial year, - Other unbudgeted sundry income such as the Street Smart Bulk LED upgrade project refund, Emergency Services Levy refund etc. Reimbursements were favourable to the Adopted Budget driven primarily by: - Insurance re-imbursements for claims made during the year, which was offset by expenditure to replace or repair items subject to the insurance claim.	519,704
Net income/ (loss) joint ventures & associates	Council's share of net income/ loss in joint ventures and associates was Favourable which was mainly attributable to Highbury Landfill Authority Inc. recording a better than forecast profit for the 2024-2025 financial year (\$119,702 compared to the Budget of \$5,250).	275,539

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.5

EXPENSES	Reasons for the Variance	Amount (\$)
Employee costs	Employee costs were favourable against the Adopted Budget due to: - Staff vacancies during the year together with difficulties experienced in recruiting replacement staff. Therefore, to meet staffing needs, contract staff were utilised. - Vacant positions that were budgeted for, combined with the time frame to replace positions which became vacant during the year due to resignations and an extremely tight labour market.	1,995,635
Materials, contracts & other expenses	Materials, contracts & other expenses were unfavourable against the Adopted Budget primarily due to, - Contracted services being Unfavourable mainly due to an overspend in Infrastructure maintenance (kerb, footways surface, traffic signs etc.) and Street Trees contracted services as this was undertaken by contractors/ contract labour hire. Maintenance during the year was temporarily outsourced to contractors. - Utilities being Unfavourable due to the timing of the water charges in May and June 2024, that was invoiced to the Council in July 2024 and higher demand for irrigation due to drier summer season December to February 2025. - Subscription, Memberships & Licences being Unfavourable mainly relating to the overspend on Information Services subscriptions due increases in some subscriptions by more than forecast CPI (such as increase in the annual subscription for Microsoft 365 licences). - Legal fees being Unfavourable due to compliance and regulatory matters that required legal advice during the year. - Unplanned maintenance costs being unfavourable mainly in relation to insurance claims and ad hoc repair and maintenance on buildings.	(1,590,776)
Depreciation, amortisation & impairment	Depreciation expense was greater than anticipated mainly due to impact of Asset Revaluation and unit cost update for Transport class of assets revaluation (discussed in Table 4 of this report).	(1,297,051)
Finance Costs	Finance costs were Favourable to the Adopted Budget primarily due to a lower-than-expected level of borrowings. This was mainly attributed to the timing of in the Trinity Valley Stormwater Upgrade Project and the rephasing of the Payneham Memorial Swimming Centre contract payment plan.	824,821

Capital Expenditure

When compared to the Adopted Original Budget, there is underspend of \$16.16m on Capital Projects for both New and Renewal. This does not represent savings as these unspent funds will be carried forward for the projects to be completed in 2025-2026 Financial year.

Statement of Finance Position (Balance Sheet)

The Net Assets of the Council at 30 June 2024, is \$695 million, against an Adopted Budget of \$613 million, a Favourable variance of \$82 million.

Major reasons for the variance in the Net Assets include:

Assets

Current Assets were Favourable compared to the Adopted Budget by \$2.259 million. This was predominantly due to the Favourable variance which amounted to \$1.486 million in Cash and cash equivalents compared to the Adopted Budget. The variance resulted mainly due to timing of the 2024-2025 Financial Assistance Grant totalling \$1.267 million received by the Council on 1 July 2024 and therefore recognised in the 2024-2025 financial year instead of the 2023-2024 Financial year.

Non-Current Assets were Favourable compared to the Adopted Budget by \$47.604 million. This was mainly due to Other Non-current assets which represent Capital Works-in-Progress as at 30 June 2025 (amount to \$39.149 million) and Infrastructure, Property, Plant & Equipment (\$7.022 million). These variances were mainly as a result of the Payneham Memorial Swimming Centre and the Trinity Valley Stormwater Upgrade Project that are yet to be capitalised.

Liabilities

Current Liabilities were Unfavourable compared to the Adopted Budget by \$2.679 million predominantly due to the Trade and Other Payables. This variance was attributable to an unpaid invoice for \$4.9 million in relation to capital works for the Payneham Memorial Swimming Centre for works performed in June 2025.

Non-Current Liabilities were Favourable compared to the Adopted Budget by \$35.027 million. This was mainly due to the long-term borrowings planned to be drawn down as part of the 2024-2025 Adopted Budget which were not required as at 30 June 2025, due to a revision of the timelines for the Payneham Memorial Swimming Centre and the Trinity Valley Stormwater Upgrade Project.

Borrowings were budgeted based on the assumptions to deliver all Capital Projects included in 2024-2025 Adopted original budget. While each year, new additional loan amounts are approved by the Council, draw-down on the loan facility, occurs on 'as needed' basis. As at, 30 June 2025, changes in Major Capital Projects delivery timeline or phasing (mainly Payneham Memorial Swimming Centre, Trinity Valley and George Street), resulted in borrowings to be at approximately 47% of the total approved Loan Budget for 2024-2025 Financial year.

Statement of Cash Flow

For the 2024-2025 Financial year, the Council is reporting a net increase in Cash and Cash Equivalents of \$988,323. The Council generated \$21.977 million from operating activities, with the funds used to complete the Councils Capital Infrastructure Works Program and the Asset Replacement Program (\$40.872 million). Proceeds from borrowings less principal repayments on Council's borrowings of \$19.885 million used to fund Major Capital projects.

FINANCIAL PERFORMANCE 2024-2025 vs FINANCIAL PERFORMANCE 2023-2024

In the 2024-2025 Financial year, the Council recorded total income of \$59.15 million, an increase of \$6.22 million (12%) compared to previous 2023-2024 Financial year. The growth was driven by higher rate income (\$3.68 million, 8%), a significant increase in grant funding (\$1.90 million, 86%) and growth in non-rate income (\$0.64 million, 9%). The variance in grants was predominantly due to the delay in advancement of 85% of the *Federal Government 2024-2025 Financial Assistance Grant* which was due to be received on 28 June 2024. The Grant totalling \$1.267 million was consequently received by the Council on 1 July 2024 and therefore recognised in the financial year 2024-2025.

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.5

Total expenses increased by \$4.02 million (8%), mainly due to higher employee costs (\$0.79 million, 5%) with variance driven by increases in line with the Enterprise Bargaining Agreements as well as impact of vacancies, increased materials, contracts and other expenses (\$0.77 million, 3%), additional depreciation (\$1.53 million, 12%) mainly driven by revaluation of assets and higher finance costs (\$0.94 million, 154%) from new borrowings during 2024-2025. This resulted in an operating surplus of \$2.30 million (3.9% of income), compared with a modest \$0.11 million surplus in 2023-2024.

Key financial indicators show improvement in operating performance (surplus ratio rising from 0.2% to 3.9%), while Net Financial Liabilities increased to 87.4% reflecting new borrowings in the 2024-2025 for the Payneham Memorial Swimming Centre Project and the Asset Renewal Funding Ratio decreased to 82.9%, primarily due to adjustments in the timing of certain renewal works, which were rescheduled to align with the delivery timeframe of another project in the same area.

Infrastructure, property, plant and equipment (8%) and Annual Depreciation (12%) increased comparative to the previous year, which predominantly reflects the outcomes of the Council's asset revaluation that was undertaken during 2024-2025 for the **Transport asset class**, which includes roads, footpaths, kerbs and related infrastructure. These revaluation adjustments are reported in the Annual Financial Statements and have had a direct impact on the Council's Balance Sheet, through an uplift in the value of infrastructure, property, plant and equipment, as well as on the Income Statement, with higher depreciation expenses flowing through to operating results. This ensures that the Council's financial statements continue to present a fair and accurate value of its asset base and the associated cost of maintaining service delivery over time.

The impact of the Asset revaluations undertake during the 2024-2025 financial year are detailed below in Table 4.

TABLE 4: IMPACT OF ASSET REVALUATION

Asset Class	Revaluation Increase/ (Decrease) \$million	Comments
Land	4.807	Represents a 1.9% increase in Fair Value based on the Local Government Price Index for March 2025.
Buildings and Other Structures	1.275	Represents a 1.9% increase in Fair Value based on the Local Government Price Index for March 2025.
Open space Assets	(0.327)	Represents a 1.4% decrease in Fair Value based on the unit price assessment undertaken by Tonkin Consulting.
Road Infrastructure	40.903	Represents a 39.3% increase in Fair Value based on the unit price assessment undertaken by Tonkin Consulting. The significant increase in revaluation is attributable to a change in the renewal philosophy to use deep lift asphalt as opposed to replacing the pavement with granular material, to meet community expectations.
Kerbing	(1.766)	Represents a 2.8% decrease in Fair Value based on the unit price assessment undertaken by Tonkin Consulting.
Footpaths	13.772	Represents a 48.5% increase in Fair Value based on the unit price assessment undertaken by Tonkin Consulting. The significant revaluation increase is attributable to the increase in maintenance spending since the previous condition and defect assessment on 1 July 2018, which resulted in an overall improvement of condition, therefore reducing the asset consumption.
River Torrens Linear Park	(0.469)	Represents an 20.3% decrease in Fair Value based on the unit price assessment undertaken by Tonkin Consulting. The revaluation increase is due to the high

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.5

Asset Class	Revaluation Increase/ (Decrease) \$million	Comments
		capital works cost for 2023-2024 reconstruction of 10 shared path segments.
Storm-water Drainage	2.802	Represents a 3.4% increase in Fair Value, based on the unit price assessment undertaken by Tonkin Consulting.
Off- Road Carparks	0.282	Represents a 11.5% increase in Fair Value, based on the unit price assessment undertaken by Tonkin Consulting.
Traffic Control Assets	(0.255)	Represents a 4.8% decrease in Fair Value, based on the unit price assessment undertaken by Tonkin Consulting.
Footbridges	1.789	Represents a 138.1% increase in Fair Value, based on the unit price assessment undertaken by Tonkin Consulting. The Asset Class includes Vehicular Bridges. A review was undertaken for each individual bridge by Tonkins, and it was determined that the current value for the 'waterway' asset is lower than the replacement cost for the asset. Therefore, as part of this Bridge valuation, the Vehicular Bridge Structure component includes an allowance for the expected over-and-above cost.
Total	62.814	

Financial Ratios

Financial indicators represented by the following three (3) Financial Ratios:

- Operating Surplus Ratio (refer to Figure 1);
- Net Financial Liabilities Ratio (refer to Figure 2); and
- Asset Renewable Funding Ratio (refer to Figure 3).

FIGURE 1: OPERATING SURPLUS RATIO

The Long-Term Financial Plan 2024-2034 Target: between 0% and 10%

The Operating Surplus Ratio expresses the Council's Operating Surplus/ (Deficit) as a percentage of Operating Revenue.

FIGURE 2: NET FINANCIAL LIABILITIES RATIO

The Long-Term Financial Plan 2024-2034 Target: less than or equal to 100%

The Net Financial Liabilities Ratio measures the extent to which the net amount owed by the Council is met by its Operating Revenue. Net Financial Liabilities are represented by Total Liabilities less Current Assets.

FIGURE 3: ASSET RENEWAL FUNDING RATIO

The Long-Term Financial Plan 2024-2034 Target: between 90% and 110% on a 3 year rolling average.

The Asset Renewal Funding Ratio measures whether the Council is renewing or replacing existing physical assets (roads, footpaths, buildings etc.), at the same rate as the stock of assets is "wearing out". The Asset Renewal Funding Ratio, is measured against the extent of the renewal expenditure that is incurred, compared to the planned renewal expenditure, as set out in the Council Asset Management Plans.

The Council's 2024-2034 Long Term Financial Plan has set a target of between 90% and 110%, on a three (3) year rolling average. In some instances, the Council may be required to accelerate or decelerate the renewal or replacement of its existing asset base.

2024-2025 AUDIT COMPLETION REPORT

The Council's External Auditors, Galpins Trading Pty Ltd, have completed the statutory audit of the Council for the 2024-2025 Financial Year and have issued an Unqualified Audit Report on the Annual Financial Statements for the financial year ended 30 June 2025. A copy of the Audit Opinion is contained in **Attachment C**.

In the Auditors opinion, the financial report prepared by the Council presents fairly, in all material respects, the Council's financial position as at 30 June 2025 and its financial performance for the year ended 30 June 2025 in accordance with the Australian Accounting Standards, *Local Government Act 1999* and *Local Government (Financial Management) Regulations 2011*.

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.5

The report identified one Low Risk finding relating to 21 employees with annual leave balances in excess of 300 hours (approximately 2 years of entitlement) and recommended that the Council implement strategies to systematically reduce these leave balances.

OPTIONS

There are no options associated with this issue.

CONCLUSION

The Council concluded the financial year with an Operating Surplus of \$2.301 million (2023-2024: \$108,598).

After Capital Items, which includes the impact of assets revaluations and grant funding specifically for asset upgrades or renewals and asset disposals, the Council is reporting a Total Comprehensive Income of \$66.955 million (2023-2024: \$41.944 million).

The Council's Auditor, Galpins, have completed the audit of the Council's Financial Statements and have advised that they will sign an unqualified Independent Auditors' Reports in the form prescribed, upon the Presiding Member of the Audit Committee signing the "Council Certificate of Audit Independence".

There were no significant issues raised during the audit of this year's Financial Statements which would prevent the Audit Committee recommending to the Council to adopt the 2024-2025 Financial Statements.

COMMENTS

Nil

RECOMMENDATION

That the Audit & Risk Committee:

1. notes the comparative analysis to the prior year audited Annual Financial Statements and original adopted 2024-2025 budget as contained in Attachment A;
 2. recommends to the Council that the Annual Financial Statements for the year ended 30 June 2025, as contained in Attachment B be adopted; and
 3. notes Galpins 2024-2025 Audit Completion Report, as included at Attachment C.
-

Mr Kym Holman moved:

That the Audit & Risk Committee:

1. *notes the comparative analysis to the prior year audited Annual Financial Statements and original adopted 2024-2025 budget as contained in Attachment A;*
2. *recommends to the Council that the Annual Financial Statements for the year ended 30 June 2025, as contained in Attachment B be adopted; and*
3. *notes Galpins 2024-2025 Audit Completion Report, as included at Attachment C.*

Seconded by Mayor Bria and carried.

6.1 CONFIDENTIAL MEETING WITH COUNCIL'S EXTERNAL AUDITOR

REPORT AUTHOR:	Manager, Governance
GENERAL MANAGER:	General Manager, Governance & Civic Affairs
CONTACT NUMBER:	8366 4593
FILE REFERENCE:	qA162025
ATTACHMENTS:	Nil

PURPOSE OF REPORT

The purpose of this report is to support the Audit & Risk Committee's legislative requirement to meet with the Council's Auditor, in confidence, at least once each year.

BACKGROUND

In accordance with Section 126(4)(e) of the *Local Government Act 1999* Act and Regulation 17B of the *Local Government (Financial Management) Regulations 2011*, the Audit & Risk Committee (the Committee) is required to meet with the Council's External Auditor on at least one (1) occasion each year on a confidential basis.

Regulation 17B prescribes that this confidential meeting must take place where a majority of Committee Members are present and that no Elected Members (except for those appointed to the Committee) or employees of the Council are to be present.

The Council's External Auditor, Tim Mulhauser from Galpins Pty Ltd has therefore been invited to attend the Meeting of the Committee.

RECOMMENDATION

That pursuant to Section 90(2) of the *Local Government Act 1999* (the Act), the Audit & Risk Committee considers it necessary and appropriate that the public, any Elected Members who are not appointed to the Audit & Risk Committee and staff present be excluded from the meeting for the purposes of the Committee's confidential meeting with the Council's Auditor in accordance with Regulation 17B of the *Local Government (Financial Management) Regulations 2011* and Section 90(3)(g) of the Act which relates to matters that must be considered in confidence in order to ensure that the Audit & Risk Committee does not breach any law or any duty of confidence.

Mayor Bria moved:

That pursuant to Section 90(2) of the Local Government Act 1999 (the Act), the Audit & Risk Committee considers it necessary and appropriate that the public, any Elected Members who are not appointed to the Audit & Risk Committee and staff present be excluded from the meeting for the purposes of the Committee's confidential meeting with the Council's Auditor in accordance with Regulation 17B of the Local Government (Financial Management) Regulations 2011 and Section 90(3)(g) of the Act which relates to matters that must be considered in confidence in order to ensure that the Audit & Risk Committee does not breach any law or any duty of confidence.

Seconded by Mr Kym Holman and carried.

5.6 INTERNAL AUDIT REPORT – BUSINESS CONTINUITY MANAGEMENT

REPORT AUTHOR:	Manager, Governance
GENERAL MANAGER:	General Manager, Governance & Civic Affairs
CONTACT NUMBER:	8366 4593
FILE REFERENCE:	qA162025
ATTACHMENTS:	A

PURPOSE OF REPORT

The purpose of this report is to present the *Business Continuity Management Internal Audit Report* to the Audit & Risk Committee for information.

BACKGROUND

At its Meeting held on 10 February 2025, the Audit & Risk Committee (the Committee) noted the primary responsibility for the Internal Audit function is assigned to the Council's General Manager, Governance & Civic Affairs by the Chief Executive Officer and endorsed the *2025-2027 Internal Audit Plan* (the Internal Audit Plan).

Supported by the Manager, Governance, the General Manager, Governance & Civic Affairs takes responsibility for the management of the Internal Audit program and liaising with Bentleys (SA) Pty Ltd who have been engaged since 2022 to conduct Internal Audit services for the Council.

The Internal Audit Plan identified that there would be an Internal Audit undertaken on the Council's Business Continuity Management (BCM) framework. Bentleys therefore commenced the BCM Internal Audit process from 15 May 2025 and the final report for the BCM Internal Audit was received on 3 October 2025.

Section 125A(2) of the *Local Government Act 1999* (the Act) requires that the person primarily responsible for the Internal Audit function must ensure that Internal Audit reports are provided to the Committee. This supports the Committee in their legislated role prescribed in Section 126(4)(g)(i)(B) of the Act which is to review and comment on Internal Audit reports.

The *Business Continuity Management Internal Audit Report* (the BCM Internal Audit Report) is therefore provided to the Committee as contained in Attachment A.

DISCUSSION

The Council currently has a two-part BCM Framework supported by initiatives such as a draft Citizen Services Plan and updates to its IT Strategy and Strategic Enterprise Risk Management. Five (5) critical functions identified by the Council include: Childcare Centre & Preschool, Finance and Administration, City Services, Information Services, and Records Management.

A review of the Council's BCM framework had been identified in the Internal Audit Plan as important to undertake in light of the significant changes to the Council's organisational structure over the last two (2) years. These organisational changes warranted a review of the suitability and effectiveness of implementation of the framework to ensure the BCM framework is appropriate. The review provided an opportunity to look for improvements in the documentation, implementation, awareness and ongoing testing of the BCM framework to ensure its effectiveness when it is required to be activated.

Bentleys conducted the Internal Audit through meetings with key Council staff and a 'Gap Analysis' evaluation of the framework against ISO 22301 (Business Continuity Management Systems).

The BCM Internal Audit Report provides a comprehensive summary of the findings, including the ISO 22301 Gap Analysis. In addition, an Implementation Road Map was provided to assist the Council with the recommended improvements.

A summary of the key points captured in the BCM Internal Report is set out below.

Through the Internal Audit process, Bentleys identified that the BCM framework is conceptually sound and that the following good practices in place:

- the current BCM Framework is modular and has been developed, separating strategic governance from operational execution through tailored Critical Function Sub-Plans (CFSPs);
- each CFSP addresses specific recovery strategies and resource needs for key services such as Childcare Centre, Finance and Information Services; and
- the Executive Leadership Team (ELT) formally endorsed the framework, demonstrating strong executive ownership and strategic oversight.

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.6

In terms of recommendations for improvement, Bentleys have suggested that the existing two (2) documents should be consolidated into a single, cohesive framework which will help improve overall implementation and usability. This will also assist to achieve more effective alignment with other relevant frameworks including Risk Management, Emergency Management and IT Disaster Recovery.

Specific areas that have been recommended for improvement by Bentleys are as follows:

- **Business Impact Analysis (BIA) & Critical Function Mapping** - That a consistent BIA & Critical Function Mapping process be undertaken across all areas of the Council's operations to ensure completeness and alignment with operational needs.
- **Business Continuity Planning (BCP) Development** - That a standard BCP template be developed with supporting processes to ensure ongoing operational relevance.
- **Stakeholder & Communication Readiness** - The preparation of a stakeholder register and engagement with these stakeholders to validate the BIA and recovery planning.
- **Training & Awareness** – Deliver targeted BCM training and awareness programs for key roles to enhance preparedness.
- **Framework Integration & Compliance** - Consolidate all existing BCM documents into a unified framework and establish a lessons-learned register to track and resolve issues identified during exercises.

The General Manager, Governance & Civic Affairs has reviewed the draft Report and responded to the recommendations with the Implementation Actions included in the Final Report.

The progress of the actions taken to address the recommendations for improvement in the BCM Internal Audit Report will be reported to the Committee at the February 2026 Meeting of the Committee in accordance with the Committee's Work Plan and to meet the legislative requirements of Section 126(4)(c) of the Act which requires the Committee to monitor the responsiveness of the Council to previous audit recommendations.

OPTIONS

Not Applicable. The report is presented for information purposes only.

CONCLUSION

The *Business Continuity Management Internal Audit Report* outlines a comprehensive set of recommendations to enhance the Council's business continuity capability, covering BIA standardisation, BCP development, stakeholder engagement, training, framework integration, and continuous improvement.

These recommendations will be addressed to ensure an operationally relevant BCM framework can be embedded across the Council to assist with preparedness in the event of an incident.

COMMENTS

Nil.

RECOMMENDATION

That the Audit & Risk Committee receive the *Business Continuity Management Internal Audit Report* as provided in Attachment A.

City of Norwood Payneham & St Peters
Minutes of the Meeting of the Audit & Risk Committee held on 13 October 2025
Item 5.6

Mayor Bria declared a general conflict of interest in this matter as his sister-in-law is an employee of Bentleys (SA). Mayor Bria advised that he would remain in the meeting and take part in the discussion and voting regarding this matter.

Ms Tami Norman moved:

That the Audit & Risk Committee receive the Business Continuity Management Internal Audit Report as provided in Attachment A.

Seconded by Mr Kym Holman and carried.

Mayor Bria voted in favour of the motion.

4.1 Budget Process

A presentation on the Budget process was provided by the Chief Financial Officer.

5.7 AUDIT & RISK COMMITTEE 2026 MEETINGS & WORK PLAN

REPORT AUTHOR:	Manager Governance
GENERAL MANAGER:	General Manager, Governance & Civic Affairs
CONTACT NUMBER:	8366 4593

PURPOSE OF REPORT

The purpose of this report is to present the Audit & Risk Committee with the proposed 2026 Schedule of Meetings and the *2026 Audit & Risk Committee Work Plan* for approval.

BACKGROUND

The proposed 2026 Schedule of Meetings meets the requirements of Section 126(5) of the *Local Government Act 1999* (the Act), which requires that the Audit & Risk Committee (the Committee) must meet at least once in every quarter.

To support the Committee to achieve its legislated function and activities the *2026 Audit & Risk Committee Work Plan* has been prepared and is contained in **Attachment A**.

STRATEGIC DIRECTIONS

Not Applicable.

FINANCIAL AND BUDGET IMPLICATIONS

Not Applicable.

RISK MANAGEMENT

Supporting the Audit & Risk Committee to meet its legislated purpose, functions and activities will provide the required independent assurance and advice to the Council.

CONSULTATION

- **Elected Members**
Elected Members receive a report following each Meeting of the Audit & Risk Committee which includes any recommendations the Committee has made to the Council (where it is not already included in a separate report on the Council Meeting Agenda) and the Minutes of the Meeting.
- **Community**
Meetings of the Council's Audit & Risk Committee are open to the public to attend in accordance with the relevant legislative provisions. The Committee Meeting documents and Terms of Reference, are publicly available on the Council's website.
- **Staff**
The preparation of the Work Plan is informed by collaboration between staff from the relevant Departments within the Council.
- **Other Agencies**
Not Applicable.

DISCUSSION

The Committee Meeting dates for 2026 are based on the mandatory requirement for the Committee to meet at least once in every quarter.

It is therefore proposed that the Audit & Risk Committee meet in the week following the Council on a quarterly basis. Meetings will continue to be held on a Monday evening and it is proposed that the starting time change from 7:00pm to 6:00pm. The Meetings will continue to be held in the Mayor's Parlour except when the Council Assessment Panel meeting is convened on the same night, in which case the Committee Meeting will be held in an alternate Meeting Room of the Norwood Town Hall.

The proposed dates for the 2026 meetings of the Committee are:

- Monday, 16 February 2026;
- Monday, 13 April 2026;
- Monday, 13 July 2026; and
- Monday, 12 October 2026.

The *2026 Audit & Risk Committee Work Plan* (the Work Plan) has been prepared on the basis of the proposed quarterly Meetings of the Committee and the *Audit & Risk Committee Terms of Reference* a copy of which are contained in **Attachment B**.

There are some minor changes to the description of supporting reports in the 2026 Work Plan which are included in red text. In addition, now that the Work Plan has been in operation for 12 months the timing of matters has been refined to work better with Council processes. These are explained in more detail below.

Where previously there was a report listed on the progress of previous External Audit recommendations at both the February and October meetings, this will now occur only at the October Meeting to align with the Council's processes.

The review of the Infrastructure & Asset Management Plans (IAMPs) which was previously listed in the October Meeting has been removed. While the Council may review its IAMPs at any time, it is only legislatively required to be reviewed within two (2) years following the General Election. Therefore, the next review will occur in the 2027-2028 financial year.

Given the close alignment between the Long Term Financial Plan and the IAMPs, any review will correspond with information presented to the April Meeting of the Committee to inform discussions regarding the Annual Business Plan.

Similar to the change for reporting on the implementation of recommendations arising from previous External Audits, now that there are enhanced processes embedded around the Internal Audit Function, the report on previous Internal Audit recommendations will only be presented to the February Meeting of the Committee. In accordance with the requirements of Section 125A(2) of the Act, Internal Audit Reports will be presented to the Committee as soon as these are completed.

The Work Plan can be varied as required should the timing of matters to be presented to the Council for consideration need to change, or new items are included as resolved by the Council or the Committee (within the overall function of the Committee). Any changes to the Work Plan will be discussed with the Committee as required.

The Work Plan will continue to be used as the basis for reporting to the Council after each Meeting of the Committee and the Annual Report to the Council on the work of the Committee, both of which are required by Section 126(8) of the Act.

OPTIONS

The Committee is required to approve the 2026 Meeting dates and times to ensure the appropriate scheduling of items and meet the legislative quarterly reporting requirement.

While the Committee can choose not to approve the Work Plan it is strongly recommended that the Work Plan as presented be approved to ensure that the Committee continues to meet its legislative obligations.

CONCLUSION

This report is intended to assist the Committee meet its legislative functions and reporting obligations, and as such, it is therefore recommended the below proposed meeting dates and times for 2026 and the attached *2026 Audit and Risk Committee Work Plan* are approved for this purpose.

RECOMMENDATION

1. That the following Meeting dates and times for 2026 be approved:
 - Monday, 16 February 2026 at 6:00pm;
 - Monday, 13 April 2026 at 6:00pm;
 - Monday, 13 July 2026 at 6:00pm; and
 - Monday, 12 October 2026 at 6:00pm.
 2. That the *2026 Audit & Risk Committee Work Plan* as contained in Attachment A, be approved.
-

Mayor Bria moved:

1. *That the following Meeting dates and times for 2026 be approved:*
 - *Monday, 16 February 2026 at 6:00pm;*
 - *Monday, 13 April 2026 at 6:00pm;*
 - *Monday, 13 July 2026 at 6:00pm; and*
 - *Monday, 19 October 2026 at 6:00pm.*
2. *That the 2026 Audit & Risk Committee Work Plan, as contained in Attachment A and as amended to incorporate the bi-annual review of progress against Audit findings, be approved.*

Seconded by Ms Tami Norman and carried unanimously.

13.10 REVIEW OF CONFIDENTIAL ITEMS

REPORT AUTHOR: General Manager, Governance & Civic Affairs
APPROVED BY: Chief Executive Officer
ATTACHMENTS: A, B

PURPOSE OF THE REPORT

The purpose of this report is to present information to the Council regarding a review of the Confidential Items which has been undertaken.

BACKGROUND

In accordance with the *Local Government Act 1999* (the Act), Council (and Committee) meetings are open to the public and attendance is encouraged and welcomed.

There are, however, times where the Council (or a Committee), believes it is necessary to exclude the public from the discussion of a particular matter as provided for in Section 90(3) of the Act.

The public will only be excluded when the need for confidentiality outweighs the principle of open decision making.

In addition to the above, the Act requires the Council to specify the duration of the order (ie determine a suitable period for which the item will remain confidential), and either impose a “release” date or event which will trigger the release of the item or a period after which the Council will review the order and determine if in fact the item should remain confidential.

In accordance with the Act, a review of the Council's Confidential Items as at 30 June 2025, has been undertaken. A summary of all Confidential Items is set out in the Register of Confidential Items which details the date of the order, the grounds upon which the order was made and whether or not the document has become public by virtue of the resolution.

A review of the Audit & Risk Committee's Confidential Items has also been undertaken and a separate register for this Committee's Confidential Items has been prepared.

A copy of the Register of Confidential Items is contained within **Attachment A**.

A copy of the Audit & Risk Committee Register of Confidential Items is contained within **Attachment B**.

Not Applicable.

DISCUSSION

Council Confidential Items

A review of the Confidential Items as at 30 June 2025, has been undertaken.

The Council's last review of the Confidential Items was conducted in April 2025, for the period ending 31 December 2024. A total of 16 items have been considered by the Council “in camera” since that time (up 30 June 2025) and these items have been included in the Register of Confidential Items.

Eleven (11) items are no longer confidential by virtue of the Council's original resolution which specified a time and/or an event to trigger the release of the item. The details of these items are contained in Attachment A.

There are eight (8) items that require the Council's consideration. These items will be considered as part of a separate Confidential report.

Audit & Risk Committee Confidential Items

A review of the Audit & Risk Committee Confidential Items as at 30 June 2025 has also been undertaken.

There are no confidential items which require the Council's consideration.

OPTIONS

The annual review in accordance with Section 91(9) of the Act is simply an administrative review. This does not mean that every confidentiality order needs to be remade. The only orders that need to be remade are those where the existing order is due to expire and the documents have been assessed against the relevant ground contained in Section 90(3) and determined to be required to remain confidential.

This report, therefore, is presented to the Council for information purposes only.

CONCLUSION

The review of the Council's (and Committee), confidentiality orders ensures compliance with the legislative requirements as set out in Sections 90 and 91 of the *Local Government Act 1999*.

RECOMMENDATION

That the report be received and noted.

14 COMMITTEE REPORTS & RECOMMENDATIONS

Nil

15 OTHER BUSINESS

16 CONFIDENTIAL REPORTS

16.1 ST PETERS BILLABONG

RECOMMENDATION 1

That pursuant to Section 90(2) and (3) of the Local Government Act 1999, the Council orders that the public, with the exception of the Council staff present, be excluded from the meeting on the basis that the Council will receive, discuss and consider:

- (b) information the disclosure of which -*
 - (i) could reasonably be expected to confer a commercial advantage on a person with whom the council is conducting, or proposing to conduct, business, or to prejudice the commercial position of the council; and*
 - (ii) would, on balance, be contrary to the public interest.*

and the Council is satisfied that the principle that the meeting should be conducted in a place open to the public, has been outweighed by the need to keep the receipt/discussion/consideration of the information confidential.

RECOMMENDATION 3

Under Section 91(7) and (9) of the Local Government Act 1999, the Council orders that the report, discussion and minutes be kept confidential until this matter is finalised.

16.2 LAND IN THE TOWN OF WALKERVILLE COUNCIL AREA

RECOMMENDATION 1

That pursuant to Section 90(2) and (3) of the Local Government Act 1999 the Council orders that the public, with the exception of the Council staff present, be excluded from the meeting on the basis that the Council will receive, discuss and consider:

- (b) information the disclosure of which -*
 - (i) could reasonably be expected to confer a commercial advantage on a person with whom the council is conducting, or proposing to conduct, business, or to prejudice the commercial position of the council; and*
 - (ii) would, on balance, be contrary to the public interest.*
- (h) legal advice.*

and the Council is satisfied that, the principle that the meeting should be conducted in a place open to the public, has been outweighed by the need to keep the receipt/discussion/consideration of the information confidential.

RECOMMENDATION 3

Under Section 91(7) and (9) of the Local Government Act 1999 the Council orders that the report, discussion and minutes be kept confidential until such time as the matter is finalised.

16.3 PAYNEHAM MEMORIAL SWIMMING CENTRE

RECOMMENDATION 1

That pursuant to Section 90(2) and (3) of the Local Government Act 1999 the Council orders that the public, with the exception of the Council staff present, be excluded from the meeting on the basis that the Council will receive, discuss and consider:

- (b) information the disclosure of which -*
 - (i) could reasonably be expected to confer a commercial advantage on a person with whom the council is conducting, or proposing to conduct, business, or to prejudice the commercial position of the council; and*
 - (ii) would, on balance, be contrary to the public interest.*

and the Council is satisfied that, the principle that the meeting should be conducted in a place open to the public, has been outweighed by the need to keep the receipt/discussion/consideration of the information confidential.

RECOMMENDATION 3

Under Section 91(7) and (9) of the Local Government Act 1999 the Council orders that the report, discussion and minutes be kept confidential until the matter is finalised, after which time the order will be reviewed.

16.4 REVIEW OF CONFIDENTIAL ITEMS - EXTENSION OF CONFIDENTIALITY ORDER

RECOMMENDATION 1

That pursuant to Section 90(2) and (3) of the Local Government Act 1999, the Council orders that the public, with the exception of the Council staff present, be excluded from the meeting on the basis that the Council will receive, discuss and consider:

- (a) information the disclosure of which would involve the unreasonable disclosure of information concerning the personal affairs of any person (living or dead).*

and the Council is satisfied that, the principle that the meeting should be conducted in a place open to the public, has been outweighed by the need to keep the receipt/discussion/consideration of the information confidential.

RECOMMENDATION 3

Under Section 91(7) and (9) of the Local Government Act 1999, the Council orders that the report, discussion and minutes be kept confidential for a period of five years, after which time the order will be reviewed.

16.5 CHIEF EXECUTIVE OFFICER'S KEY PERFORMANCE INDICATORS

RECOMMENDATION 1

That pursuant to Section 90(2) and (3) of the *Local Government Act 1999* the Council orders that the public, with the exception of the Council staff present, be excluded from the meeting on the basis that the Council will receive, discuss and consider:

- (a) information the disclosure of which would involve the unreasonable disclosure of information concerning the personal affairs of any person (living or dead).

and the Council is satisfied that, the principle that the meeting should be conducted in a place open to the public, has been outweighed by the need to keep the receipt/discussion/consideration of the information confidential.

RECOMMENDATION 3

Under Section 91(7) and (9) of the *Local Government Act 1999* the Council orders that the report, discussion and minutes be kept confidential for a period of five (5) years, after which time the order will be reviewed.

17 CLOSURE
