Adey Reserve

Existing Conditions

Adey Reserve

Play area facing Hampden Street, anchored by existing vegetation

Summary of Strategic Recommendations:

- Relocate the playground to a central area of the reserve, closer to other features like cricket nets and courts.
- Incorporate “nature” themed design through the use of natural materials and connections offered to the adjacent vegetated areas.
- Do not fence the playground unless required for dog control; if so, use soft landscaping and sensitive materials.
- Design should focus on natural shade, accessibility, and connections with other recreational facilities.
- Prioritised due to high proportions of children in the area and the park’s potential as a showcase recreational space.
